Layout

1) **Free Electron Lasers**
   1) **What is an FEL ?**
   2) **Status of FEL's worldwide vs Storage Rings**

2) FELs vs. Synchrotron Sources:
   1) Understand the Peak Brilliance graphs
   2) LCLS
   3) In depth comparison from the experimentalist point of view

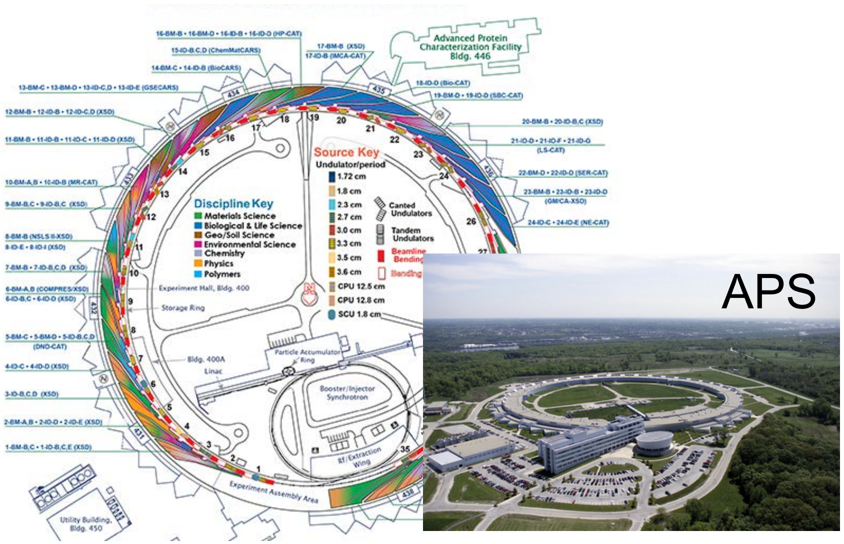
3) Experimental Strategies to use FELs

   (More details provided by Diling in the next lecture)

4) What's coming next ?

Take-away messages indicated by

Synchrotrons



Ultimate e-recycling

Storage Ring

- **MANY** Insertion Devices (ID) & BMs
- ≥ 1 instrument per Undulator
- Independent operation of ID’s

Free Electron Lasers

Pulsed & single path

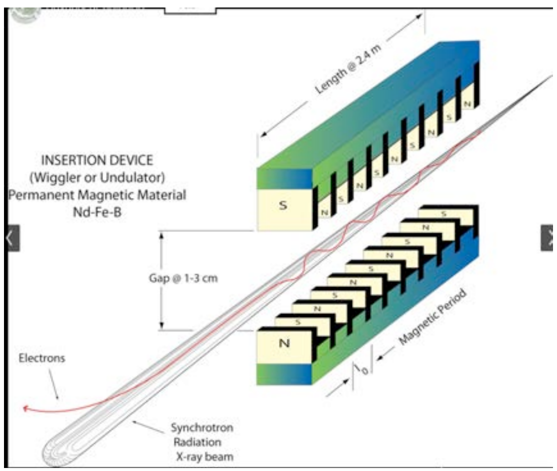
Linear accelerator

- Very limited number of Undulators (1 to 5)
- ≥ 1 instruments per undulator
- Almost one instrument at a time

SLAC

Synchrotrons

Typ. 1 to 5 meter long



Free Electron Lasers

VERY long : typ. >100 meters

Small e-beam emittance

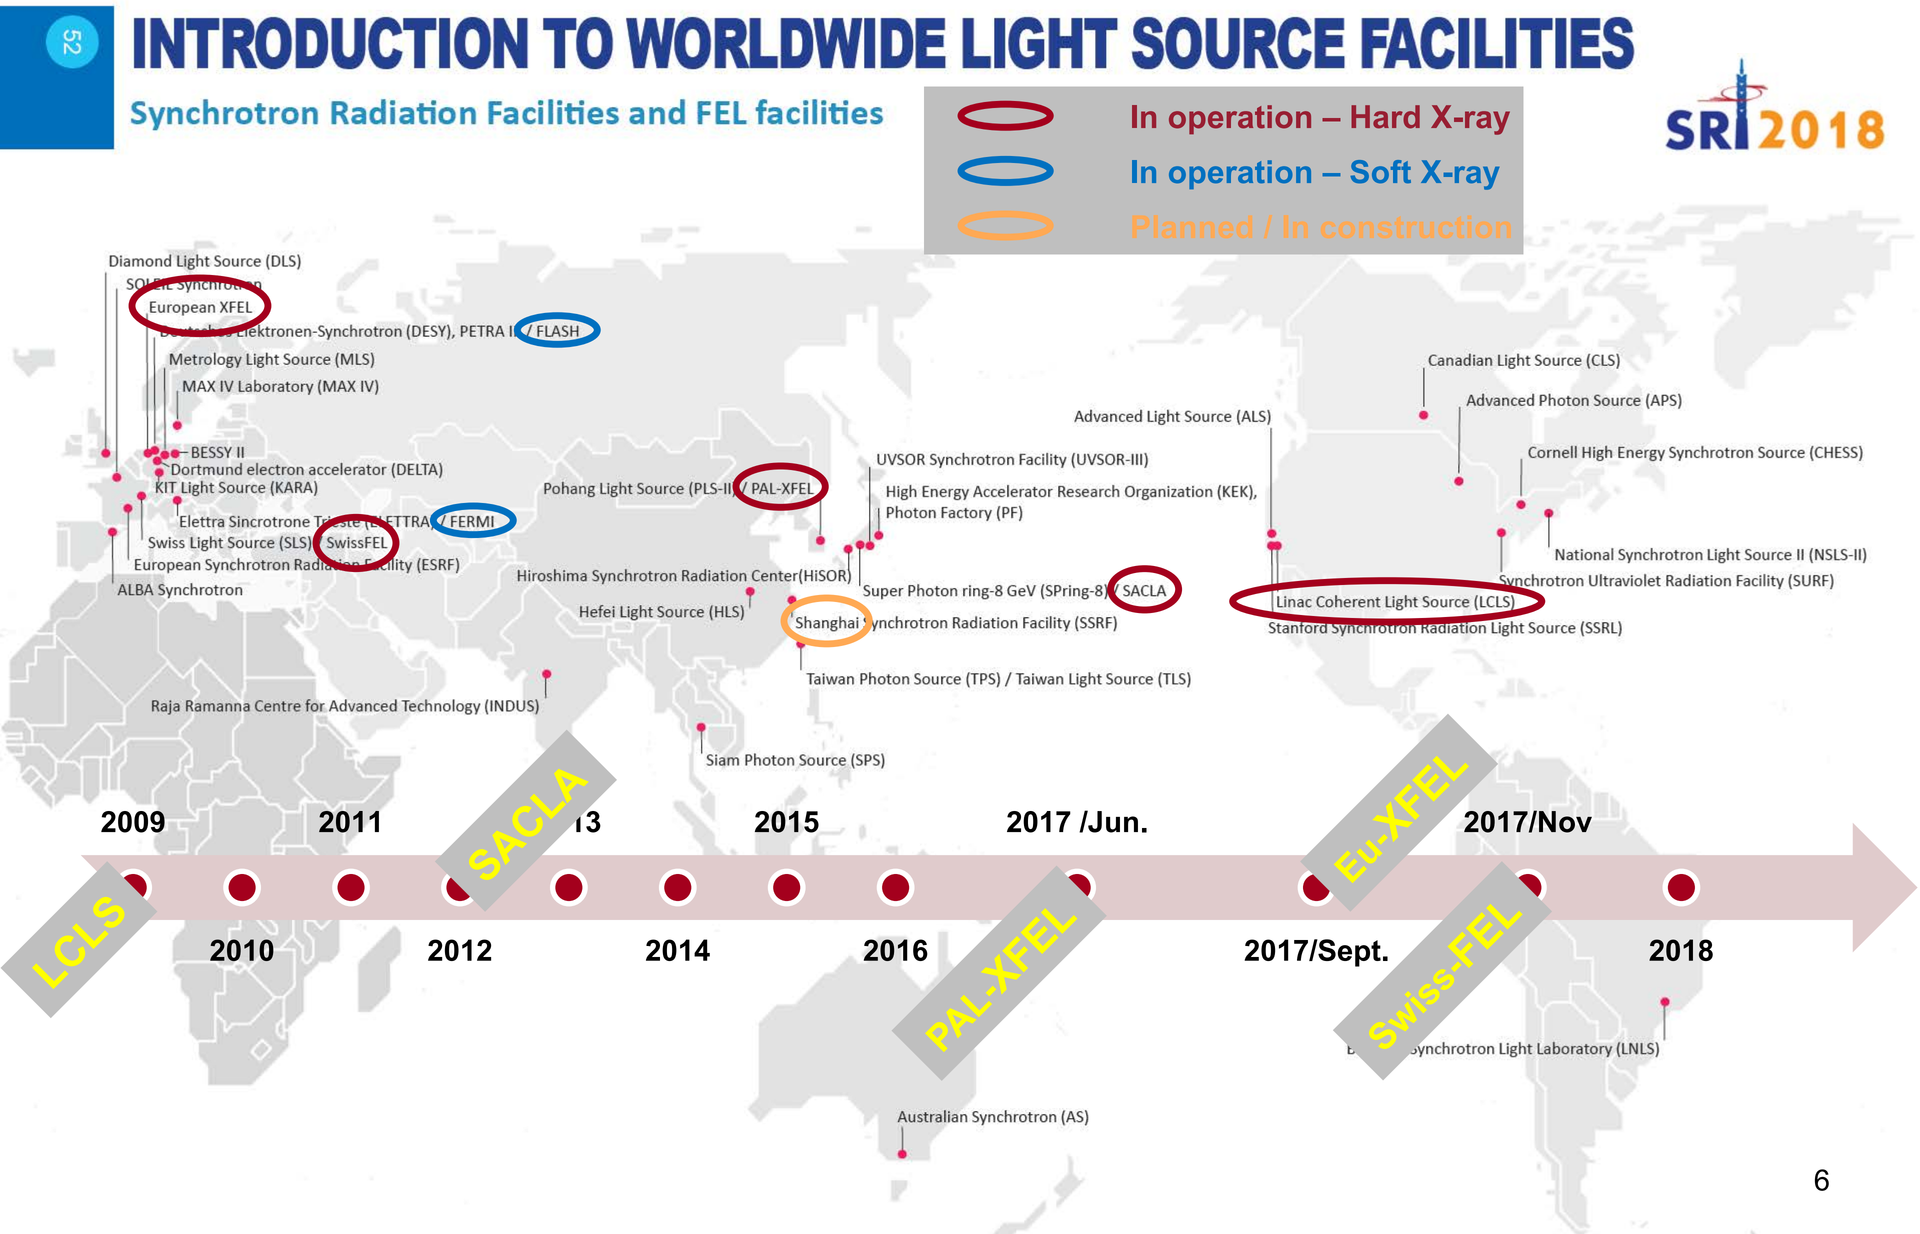
1.2) FELs and Synchrotrons Worldwide



FEL vs. SR

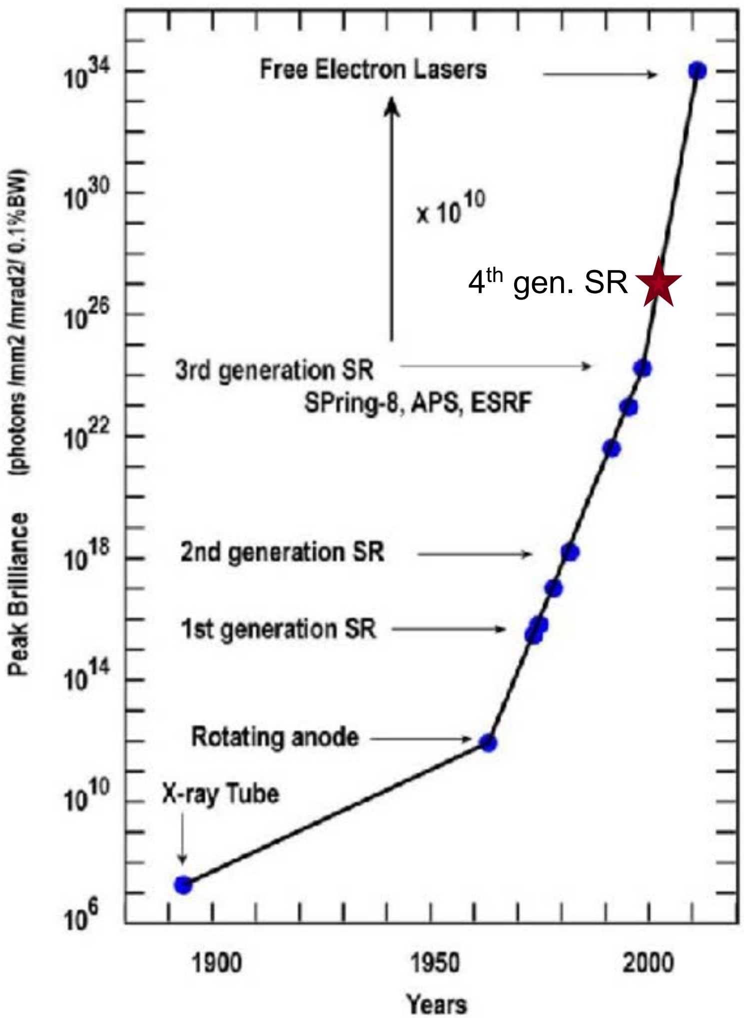
1) Free Electron Lasers
    1) What is an FEL ?
    2) Status of FEL's worldwide vs Storage Rings

2) **FELs vs. Synchrotron Sources:**
    1) **Understanding generations and the Brilliance graphs**
    2) LCLS
    3) In depth comparison from the experimentalist point of view

3) Experimental Strategies to use FELs

4) What's coming next ?

2.1) FEL vs. SR : Understanding Generation and Peak Brilliance



Shintake, T. (2007). Proc. of IEEE PAC, pp 89 - 93.

”… it is clearly a misnomer to classify an X-ray FEL as a `fourth-generation light source‘. The fourth-generation light sources are now clearly identified as diffraction-limited storage ring sources …“

White, Robert, Dunne, J. Synch. Rad. **22** (3), pp 472-476 (2015)

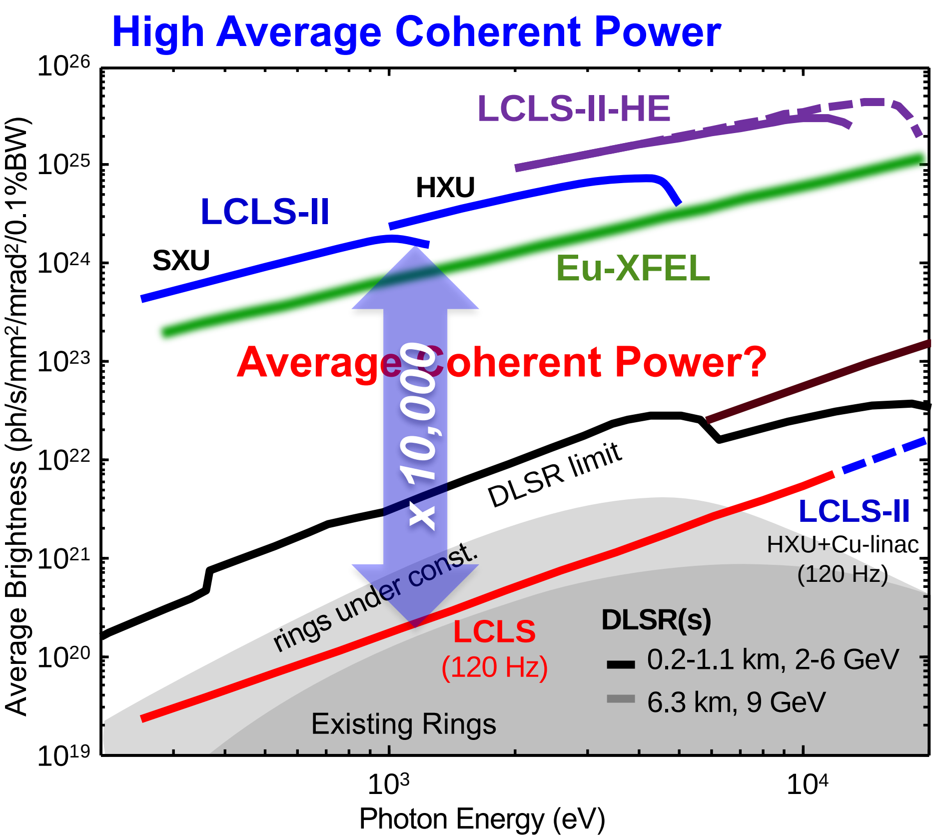
Attention to the Units !

$$\frac{Photon}{s \quad mm^2 \quad mrad^2 \quad (0.1\%\, BW)}$$

Ballpark	**SR**	**FEL**	**Gain**
s	~100ps	~50fs	x 2.10^3
mm	~2	~0.05	x $0.5.10^2$
mrad	~30-50	~1	x 4.10^3
(0.1% BW)	~ 2-3%	~0.1%	x $0.3.10^2$

2.1) FEL vs. SR : Understanding Generation and Average Brilliance

SLAC



Pay Attention to the Units !

$$\frac{Photon}{s \quad mm^2 \quad mrad^2 \quad (0.1\%\,BW)}$$

Ballpark	SR	FEL	Gain
s	~100ps	~50fs	x 2.10^3
mm	~2	~0.05	x 0.5.10^2
mrad	~30-50	~1	x 4.10^3
(0.1% BW)	~ 2-3%	~0.1%	x 0.3.10^2

x10^4 rep. rate

High rep. rate

x 10^2-10^3 diffraction limit

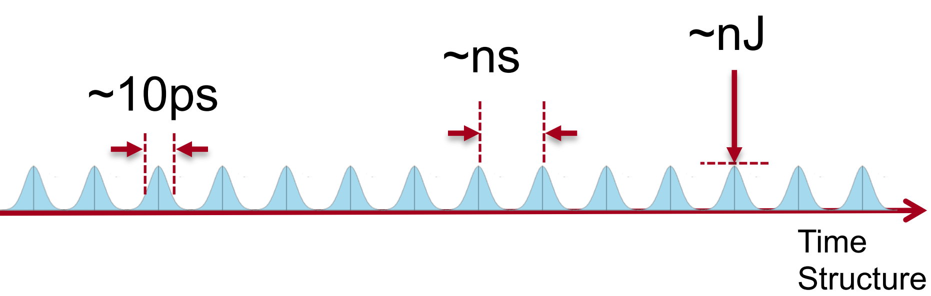
MBA upgrades

2.1) FEL vs. SR : Big Picture

Storage Ring

Pulse duration : typ. 50-100ps

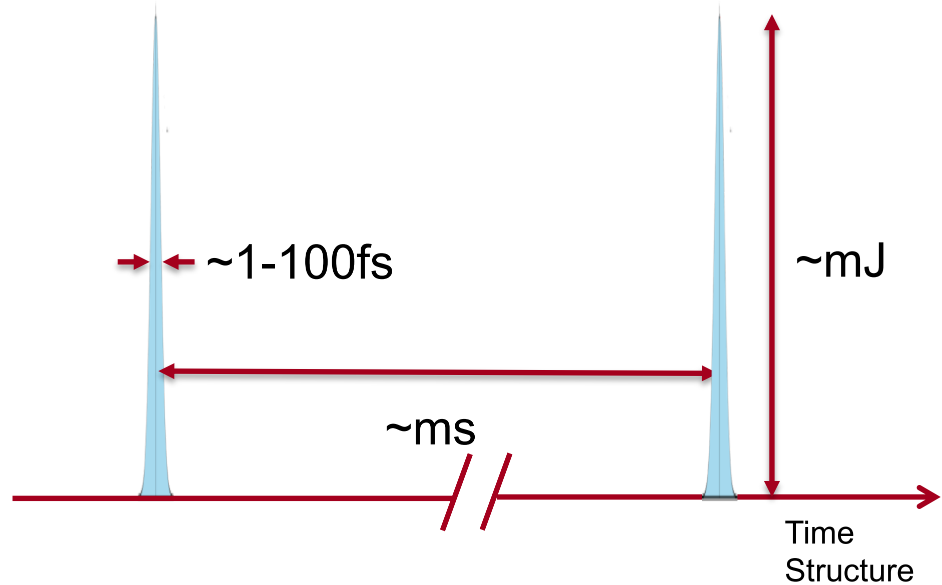
High repetition rate (100sMHz)



FEL : LCLS

Pulse duration : typ. < 100fs

Repetition rate ~50-100Hz



<u>"Unusual" unit:</u> 1mJ = 6.242 10^{12} keV

1mJ @ 8keV ~ 7.8 10^{11}

1mJ @ 1keV ~ 6.2 10^{12}

The average number of photon per second on a storage ring is similar to the number of photon on average per shot on a FEL

FEL vs. SR

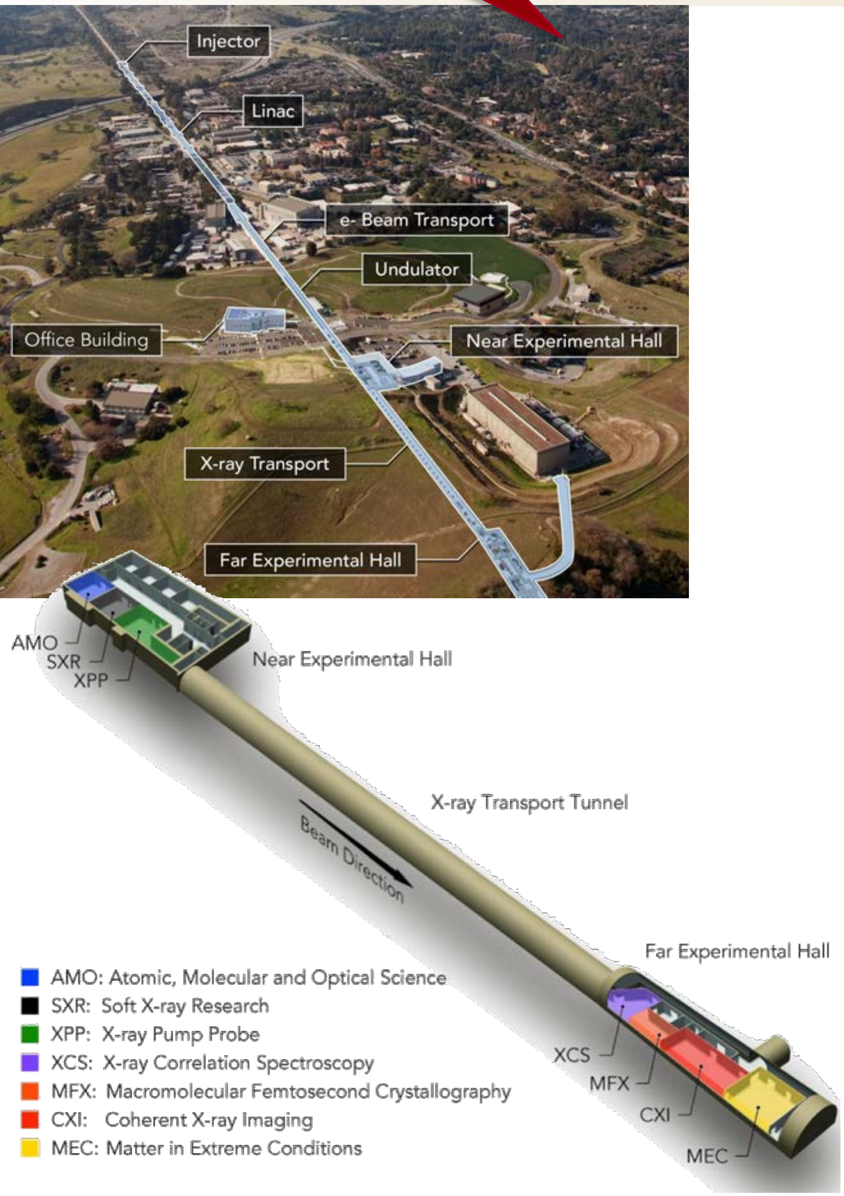
1) Free Electron Lasers
   1) What is an FEL ?
   2) Status of FEL's worldwide vs Storage Rings

2) **FELs vs. Synchrotron Sources:**
   1) Understanding generations and the Brilliance graphs
   2) **LCLS**
   3) In depth comparison from the experimentalist point of view

3) Experimental Strategies to use FELs

4) What's coming next ?

Parameters Overview



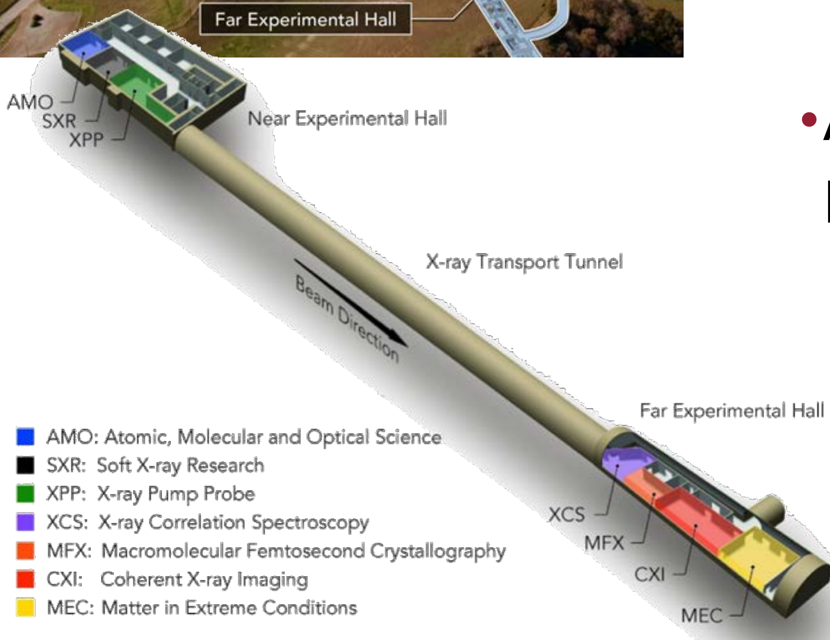
http://LCLS.slac.Stanford.edu

	LCLS PARAMETERS		Unit
Linac	e-beam energy	2.5-16.9	GeV
	Length	~1	km
	Slice emittance	0.5-1.2	μm
Undulator	Active Length	~112	m
	Period	30	mm
	K	3.5	--
	Peak Field	1.25	T
	Typical SASE Parameters		
X-ray Beam	Photon Energy (1st harm.)	0.28-12.8	keV
	Number Photons	$\sim10^{12}$	ph/pulse
	Rep. Rate	Up to 120	Hz
	Pulse Duration	~1-200	fs
	Size (unfocused)	200-500	μm
	Divergence	1-2	μrad
	Trans. Coherence	Full	--
	Polarization	Horiz.	--
	Bandwidth $\Delta\lambda/\lambda$	0.1	%

White, Robert, Dunne, J. Synch. Rad. **22** (3), pp 472-476 (2015)

2.2) LCLS A User Facility !

SLAC



http://LCLS.SLAC.Stanford.edu

- LCLS is a User facility
  - funded by the Department of Energy, Office of Science, Office of Basic Energy Science

U.S. DEPARTMENT OF ENERGY | Office of Science

- Access is provided as any other User Facility in the US *(APS, SNS, etc.)*:
  - Proposal based and open to all
  - Scientific merit evaluation
  - Free of charge for non-proprietary research

White, Robert, Dunne, J. Synch. Rad. **22** (3), pp 472-476 (2015)

FEL vs. SR

1) Free Electron Lasers
   1) What is an FEL ?
   2) Status of FEL's worldwide vs Storage Rings

2) **FELs vs. Synchrotron Sources:**
   1) Understanding generations and the Brilliance graphs
   2) LCLS
   3) **In depth comparison from the experimentalist point of view**

3) Experimental Strategies to use FELs

4) What's coming next ? LCLS Upgrades

2.3) SR vs FEL : Important Parameters

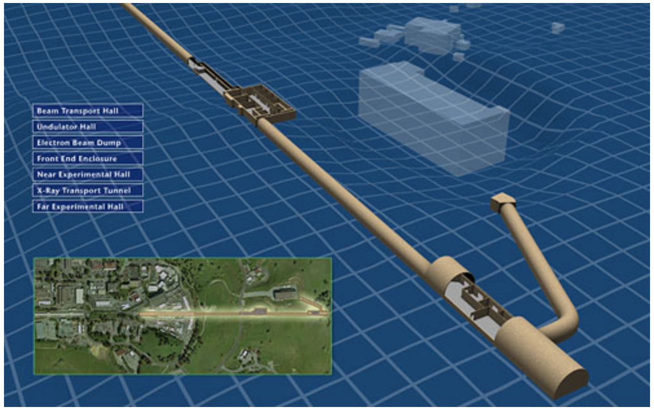
What are the important parameters ?

① Flux
② Collimated beam
③ Beam position
④ Intensity
⑤ Pulse durations
⑥ Temporal fluctuations
⑦ Energy spectrum
⑧ Coherence

2.3) Synchrotron Sources

Highly **stable** (intensity, position, pointing, energy) and partially coherent storage rings sources with high brilliance in the hard X-ray Regime

Parameter	Comment
Time Structure	Continuous
Intensity	Stable
Position/ pointing	Stable
Energy spectrum	Stable
Timing	Stable
Coherence	Partial



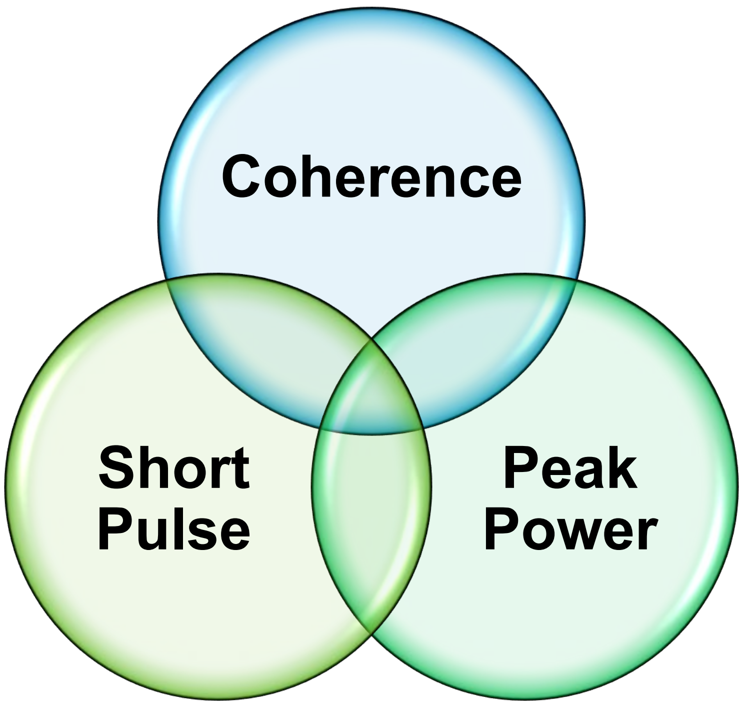
Measuring Ultra-Fast phenomena (< 100ps)

Parameter	Storage Ring	FEL
Time Structure	Continuous	**Pulsed**
Intensity	Stable	**Fluctuations**
Position/ pointing	Stable	**Fluctuations**
Energy spectrum	Stable	**Fluctuations**
Timing	Stable	**Fluctuations**
Coherence	Partial	**Full**

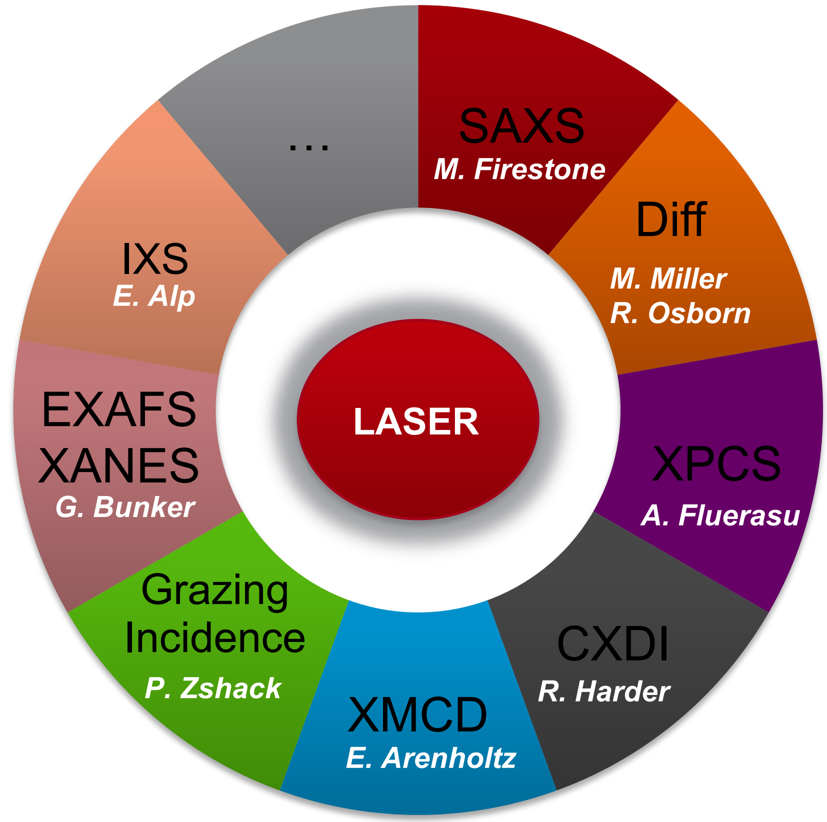
JITTER

2.3) Free Electron Lasers : X-ray Scattering

- Experiments use at least one of the FEL beam properties

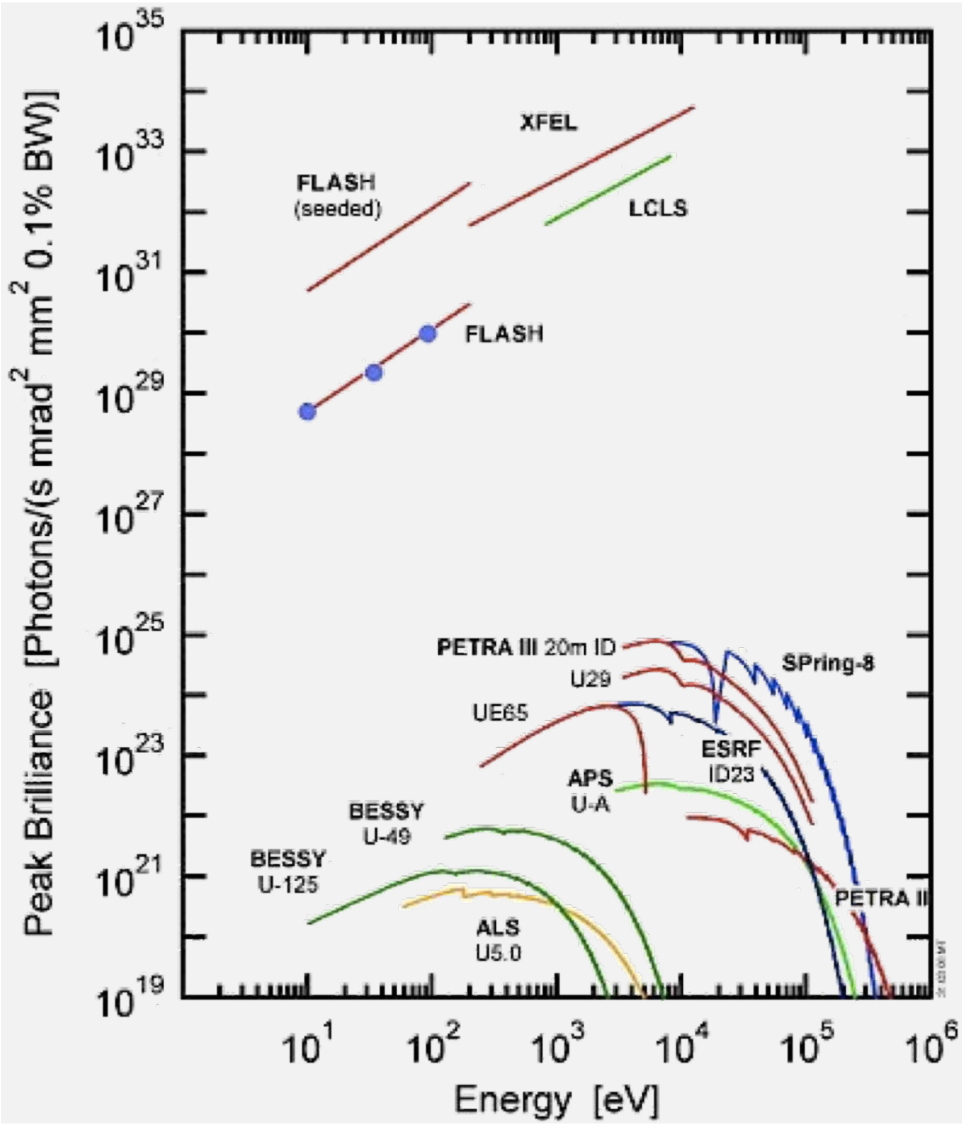


- Some experiments use more than one technique simultaneously or sequentially



Quizz : meaning of the acronyms

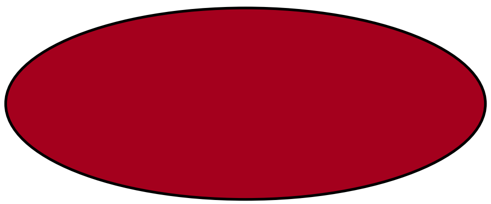
(1) FLUX



- FEL sources provide unprecedented peak brilliance
- This originates from the pulsed nature of these sources.
- One typically gets per shot what one gets per second on a SR

(2) COLLIMATION

Storage Ring

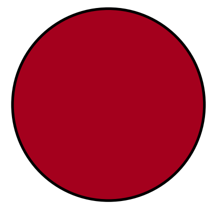


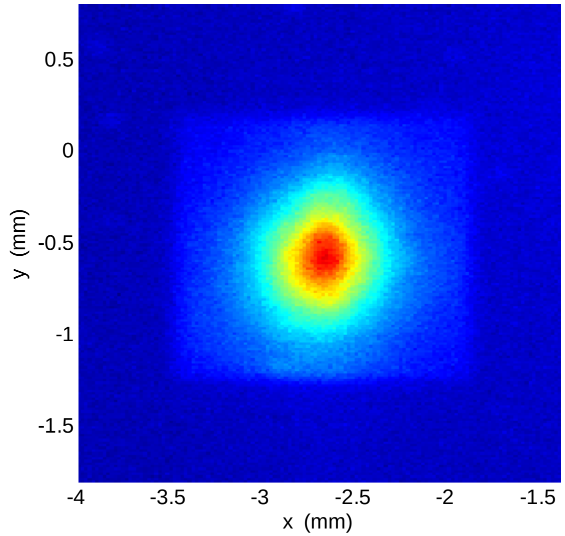
Typ. beam size @40-50m
2-3 x0.5-1mm (h,v)

Typ. divergence high-β
30 x 15μrad (h,v)

(example : Troika ID10A at the ESRF)

FEL





Typ. beam size @200-400m
0.5-1 x0.5-1mm (h,v)

Typ. Divergence
1-2 x 1-2μrad (h,v)

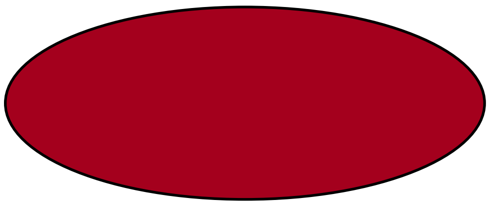
MOIANB01 Proceedings of BIW10, Santa Fe, New Mexico, US H. Loos et al.

OPERATIONAL PERFORMANCE OF LCLS BEAM INSTRUMENTATION*

It can have a huge impact on X-ray optics (e.g. focusing)

SLAC

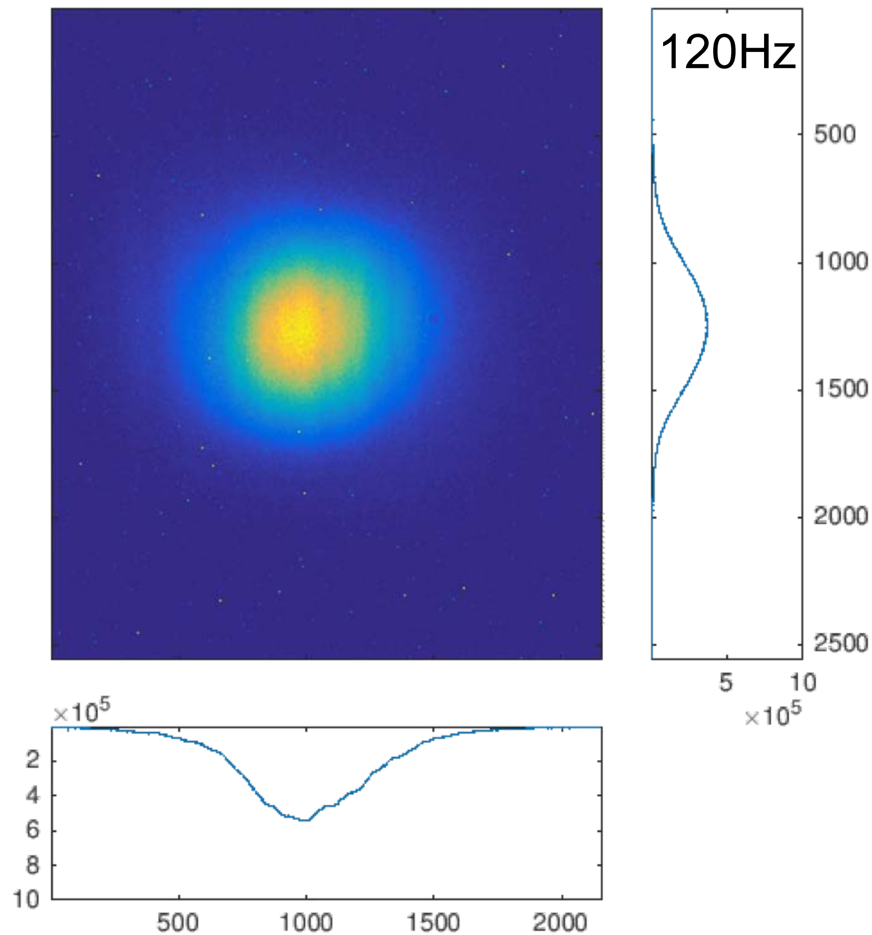
Storage Ring



Rock Stable !

FEL

XPP Instrument



Beam fluctuates in position (>10% of its size)

(4) INTENSITY

SLAC

Storage Ring | **FEL**

Rock Stabl

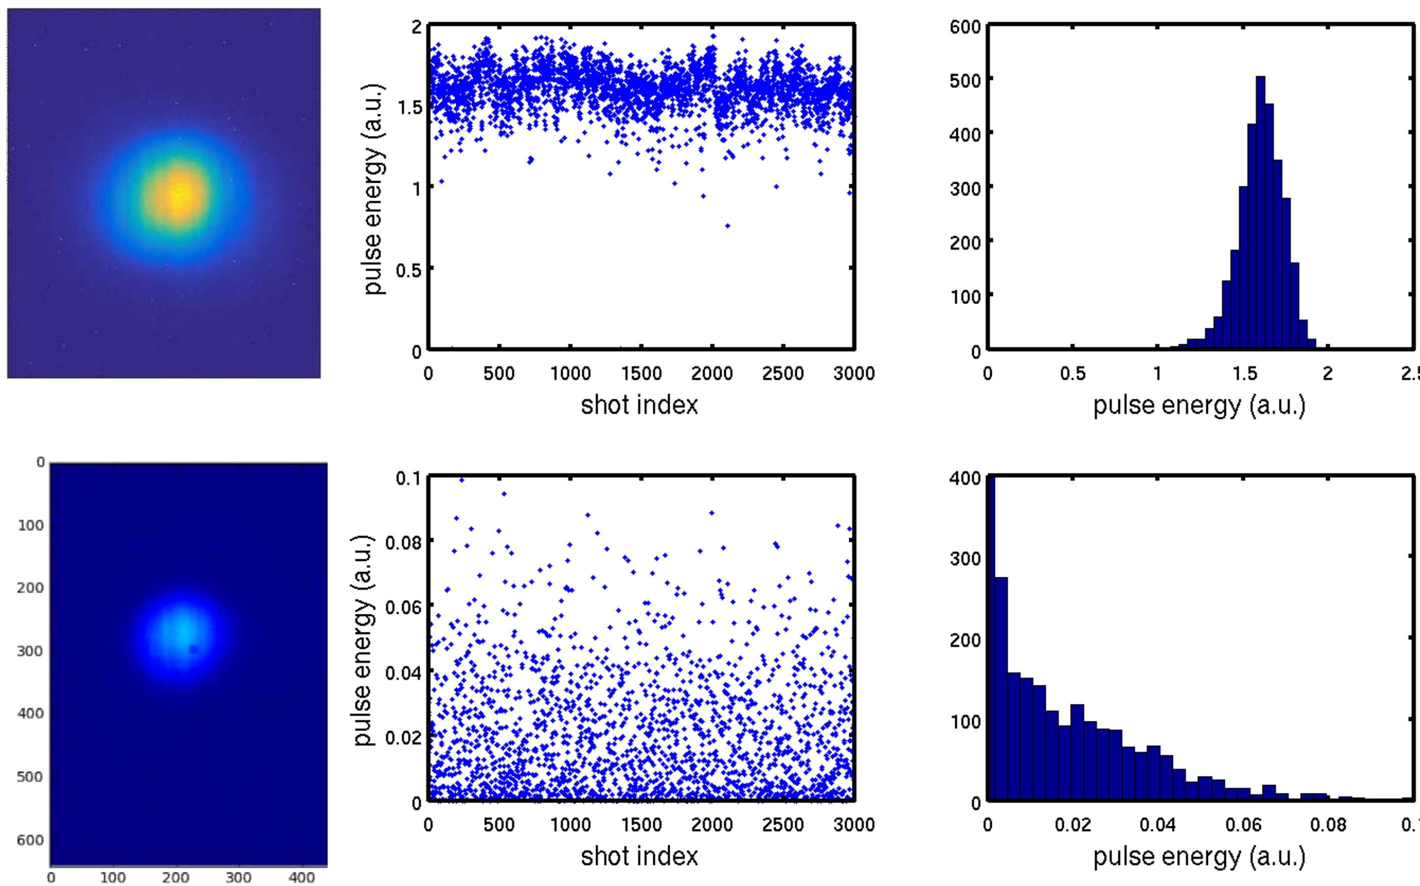
Without
Top-up

Drastic difference between pink and mono beam



Courtesy of XPP

(4) INTENSITY

Storage Ring

Rock Stable !

With

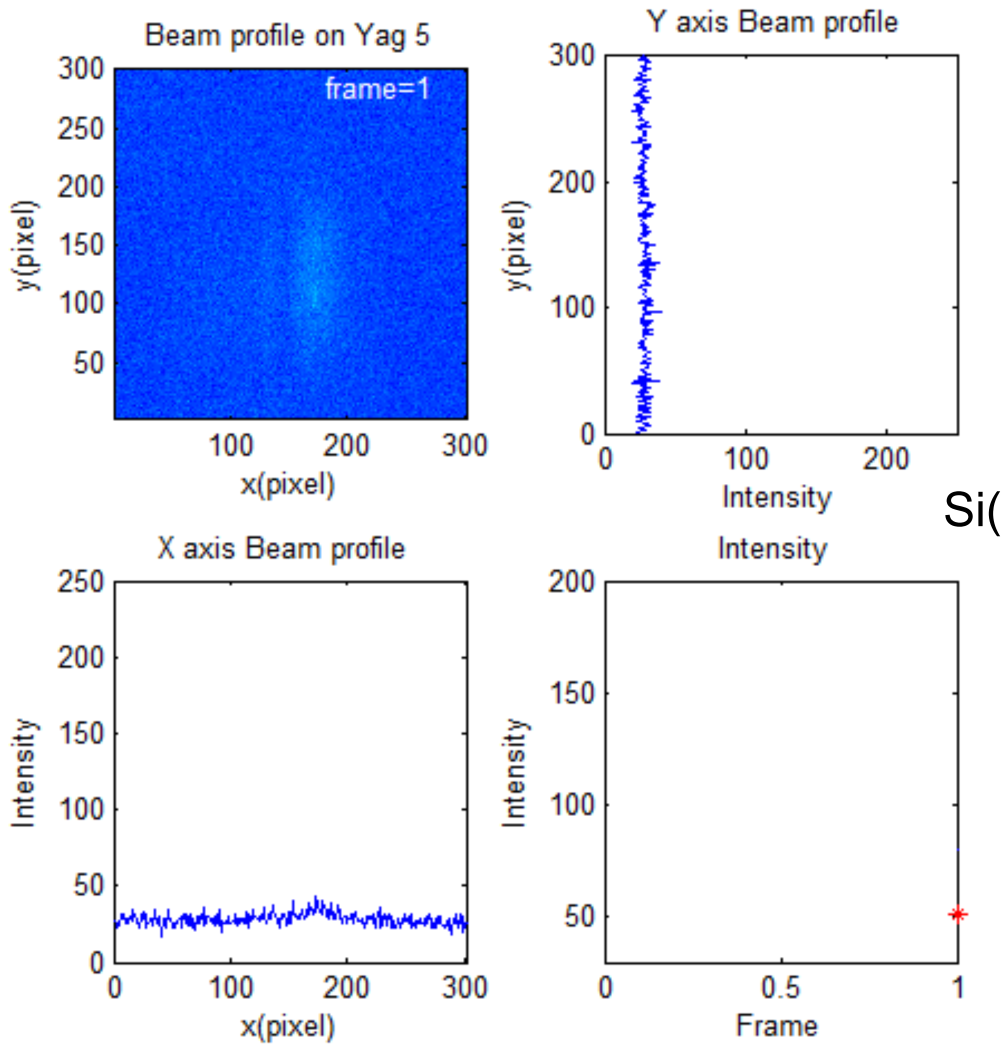
Or

Without

Top-up

FEL

Intrinsic intensity fluctuation coming from the SASE process itself, in addition of machine instability and special behavior in monochromatic beam



Si(111)

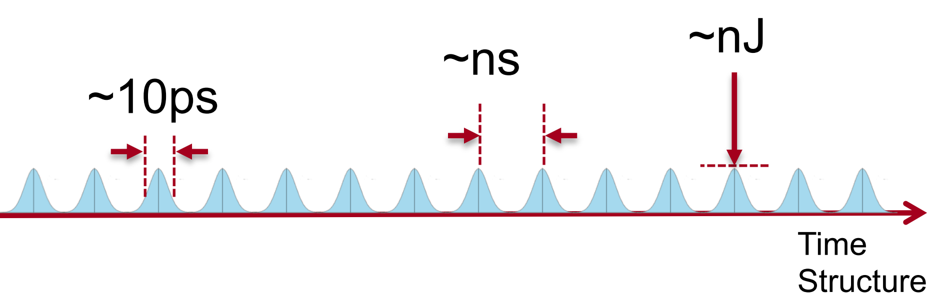
(5) PULSE DURATION & (6) TIMING

SLAC

Storage Ring

Pulse duration : typ. 50-100ps

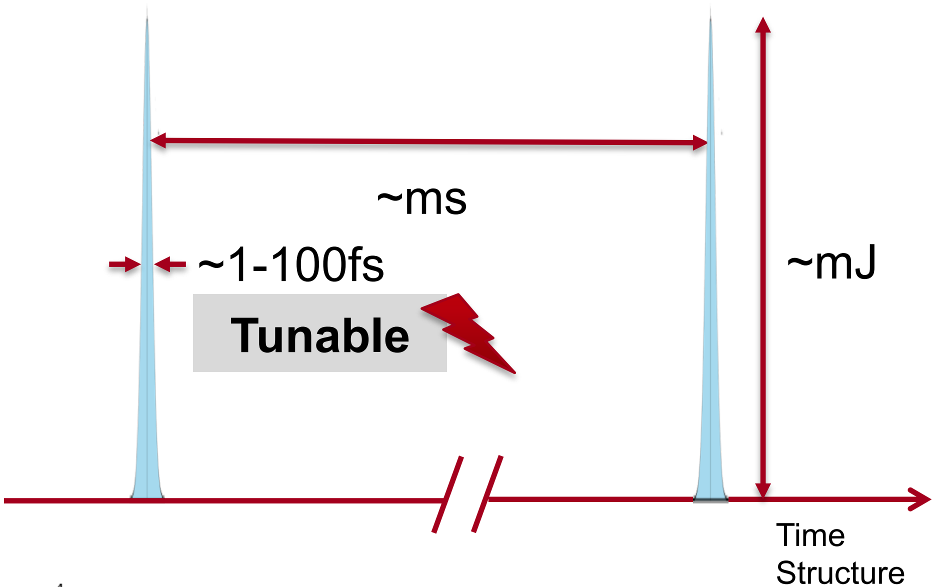
High repetition rate (100sMHz)

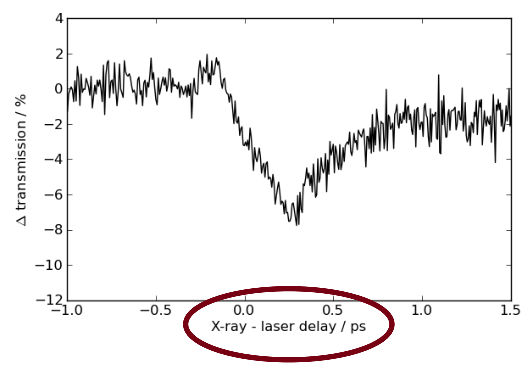


FEL : LCLS

Pulse duration : typ. < 100fs

Repetition rate ~50-100Hz





Step position indicates arrival time

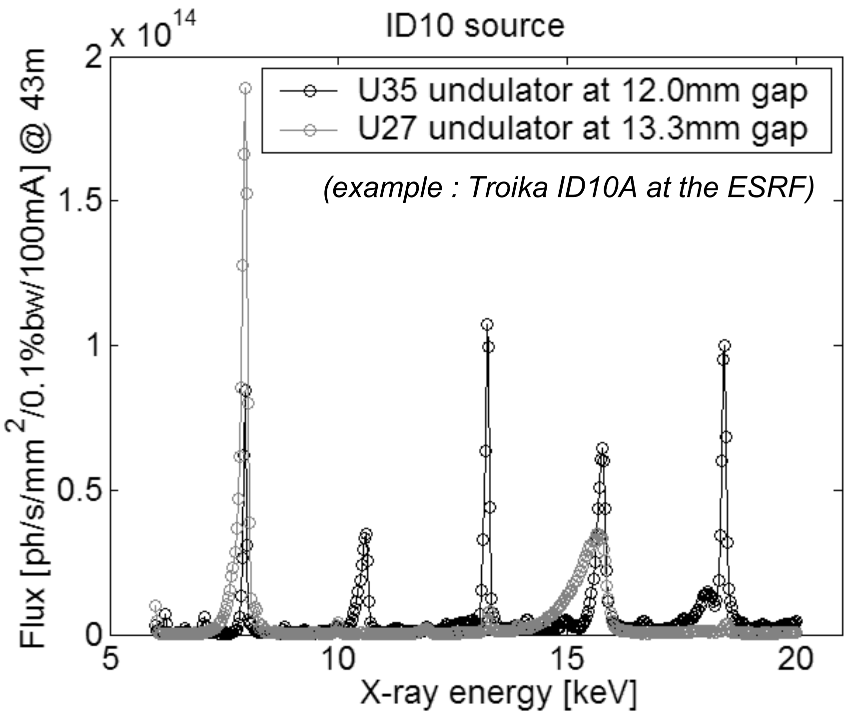
(7) E-spectrum

Storage Ring

Access to high Energies with 3rd harmonic

Stable and well define energy spectrum

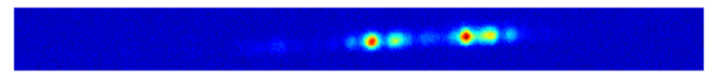
1st harmonic width : 1-4%



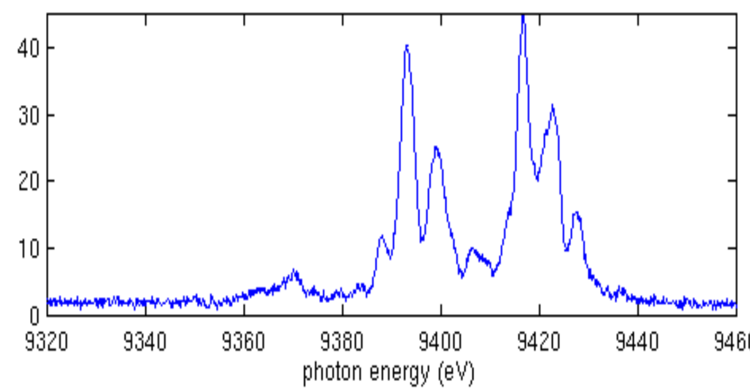
FEL

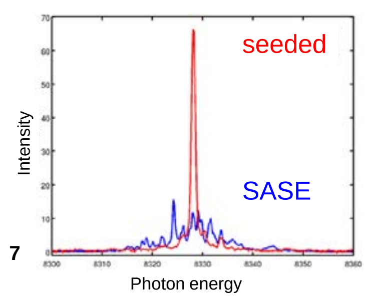
Access to high Energies with 3rd harmonic

1st harmonic width : 0.1-0.2% (<dE/E>=0.7%)



Fluctuating spectrum : e-beam jitter and structure





“seeding” will fix this

(8) Degree of Coherence

SLAC

Storage Ring

Limited degree of Coherence

Slit down the beam to typ. 20x20 micron beams to extract the coherent fraction of the beam.

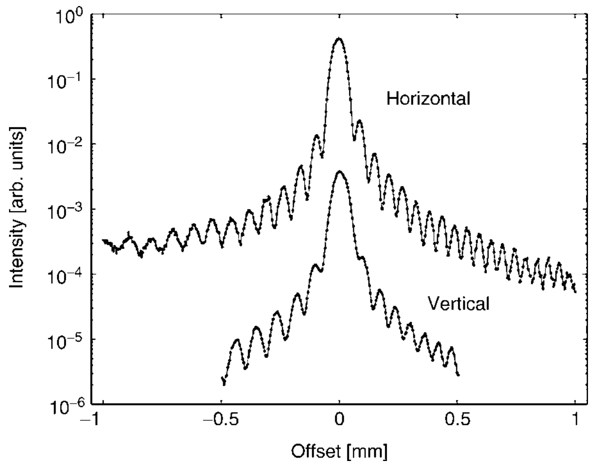


Figure 18-2
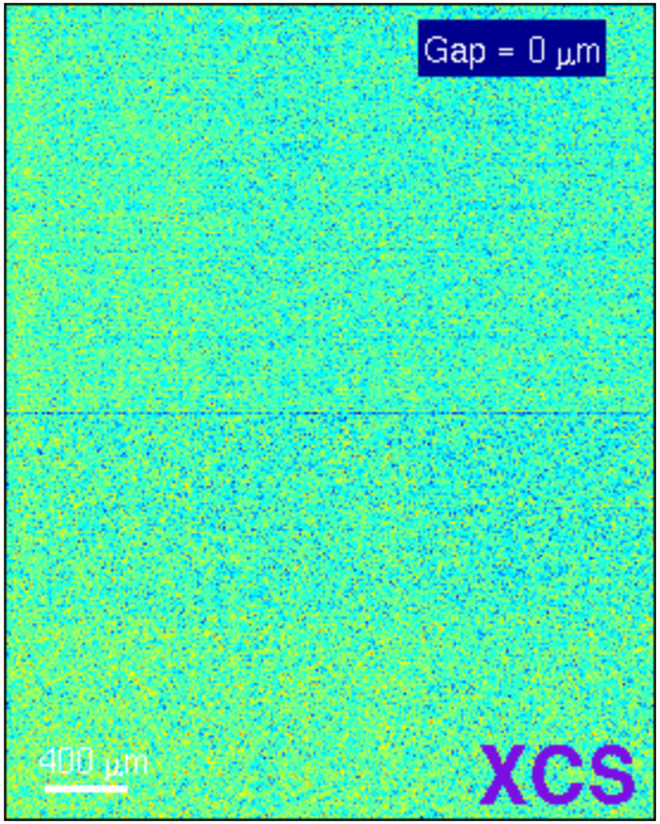
Airy fringes from a 5 × 5 μm^2 slit, recorded with λ = 1.54 Å radiation at 1.5 m from the slit. The visibility V of the fringes can be quantified by $V = (I_{max} - I_{min})/(I_{max} + I_{min})$, where I_{max} is a fringe maximum and I_{min} is an adjacent minimum

Grübel, Madsen, Robert ,XPCS , Springer (2008)

FEL

The beam is fully transversely coherent



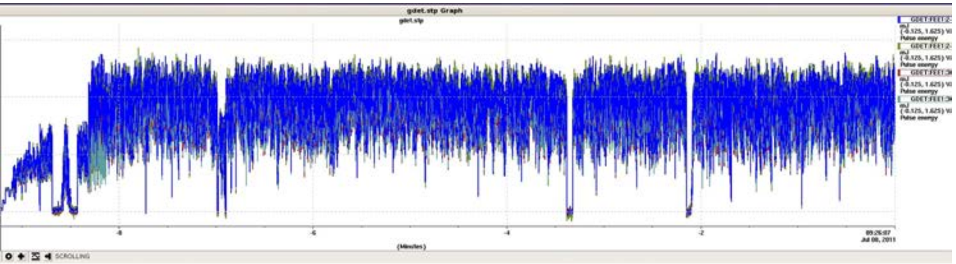
A. Robert et al., J. Phys : Conf. Ser. **425,** 212009 (2012)

Day to day operation

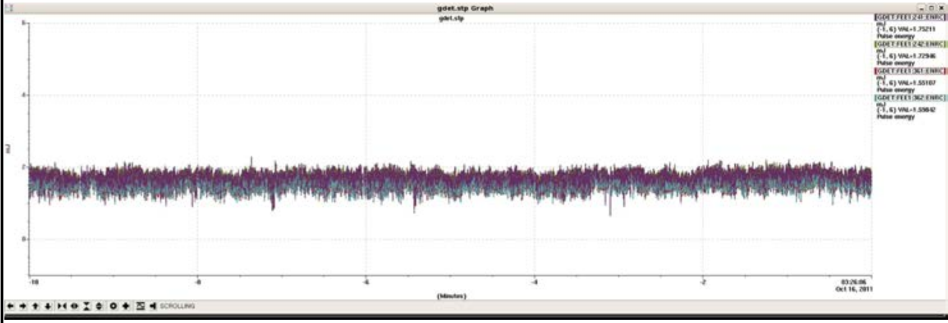
Something very different from SR sources , we have :

" BAD" days and **"GOOD" days**

- a little less than 1mJ
- Very large intensity fluctuations



- more than 1.5mJ up to 5 mJ
- 10-15% intensity fluctuation and no loss at all



3) FEL Experimental Strategies

1) Free Electron Lasers
   1) What is an FEL ?
   2) Status of FEL's worldwide vs Storage Rings

2) FELs vs. Synchrotron Sources:
   1) Understand the Peak Brilliance graphs
   2) LCLS
   3) In depth comparison from the experimentalist point of view

3) **Experimental Strategies to BEST use FELs**

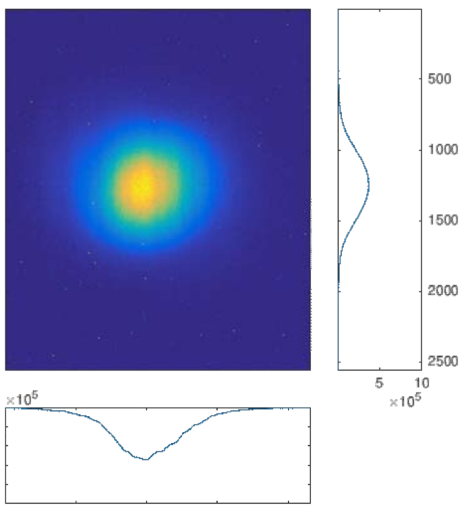
4) What's coming next ?

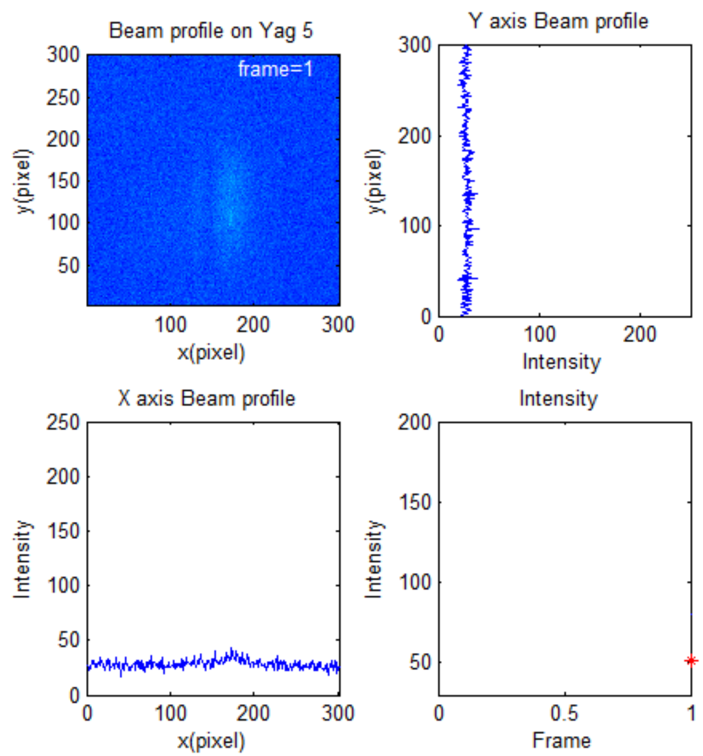
3.1) Normalizing, Filtering, Binning

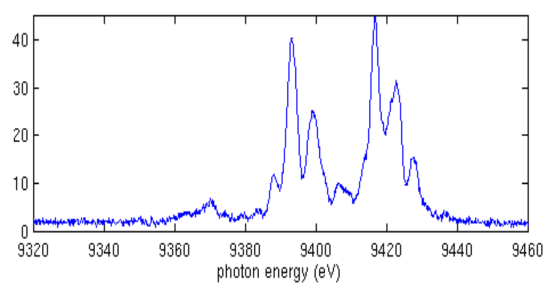
- Each X-ray Pulse is UNIQUE
- Each X-ray pulse fluctuates in many ways

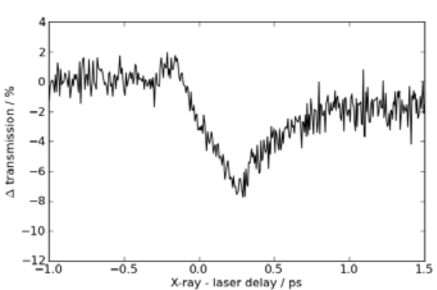
- Necessity to characterize with precision every pulse to the extent possible
- Diagnostics are critical

- Filtering
- Normalizing
- Binning
- Averaging





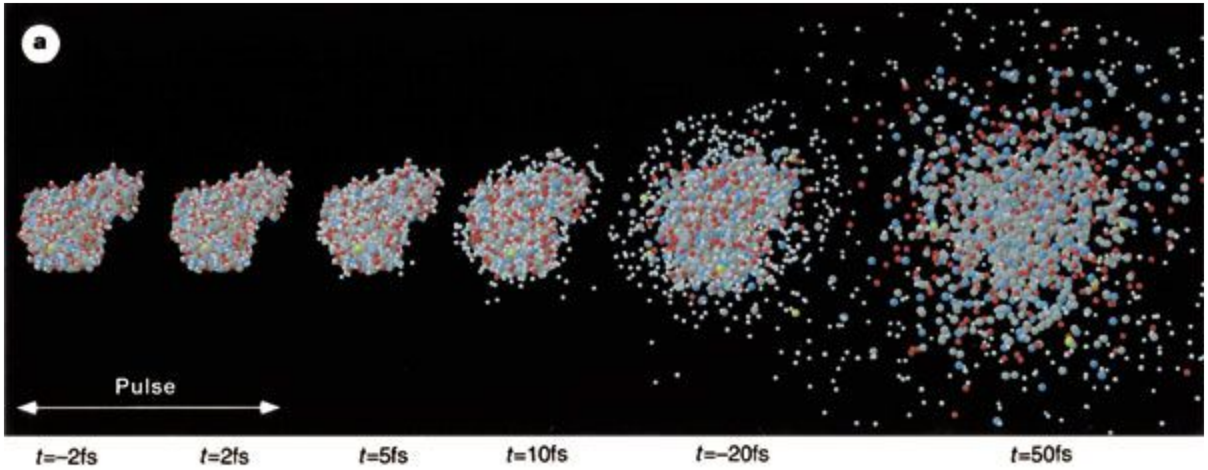




3.2) Diffract before destroy (c.f. Diling Zhu)

Let’s correct a misconception !
Most samples survive a single shot FEL beam

If all photons are focused in a very small spot size (<2-5 micron) nothing survive a single shot

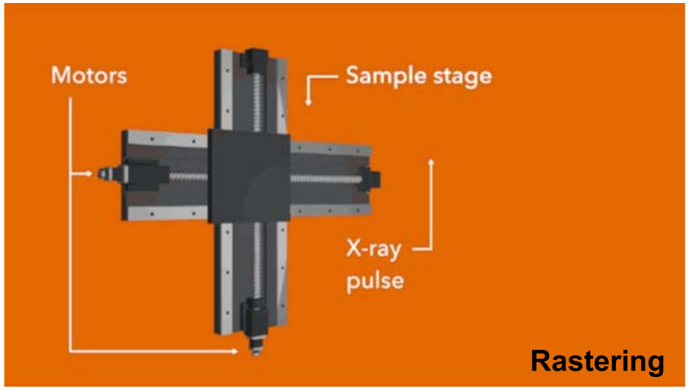


Neutze et al., Nature **406**, pp752 (2000)

“Diffract-Before-Destroy” take advantage of the peak power to obtain information before the systems reacts to the X-ray probe

3.4) Sample Delivery to support "Diffract and Destroy"

SLAC

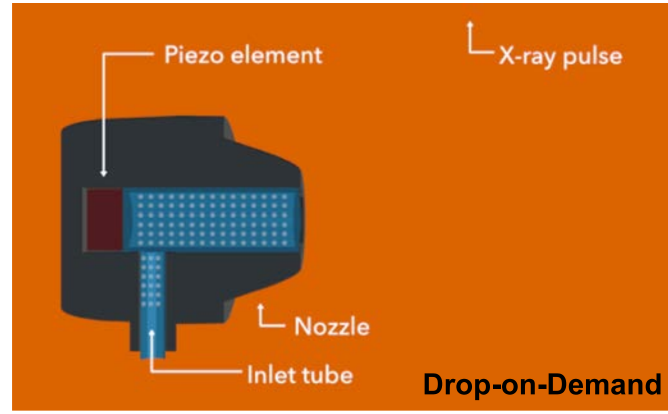


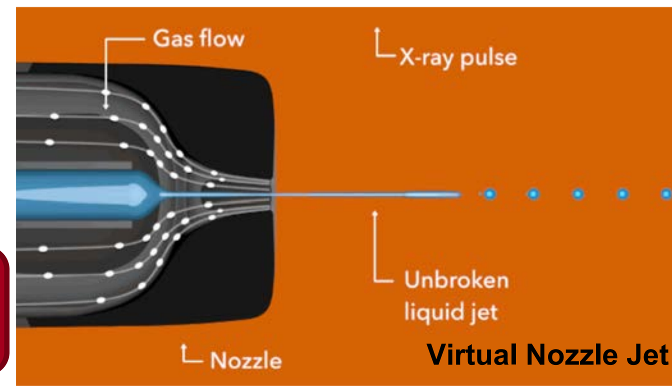
SOLIDS

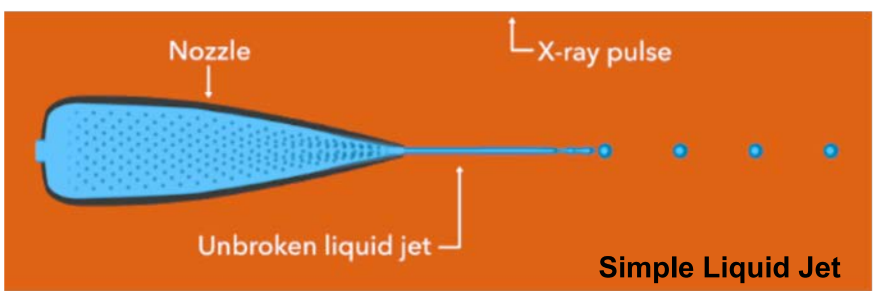
Ability to change the sample when damage by the FEL

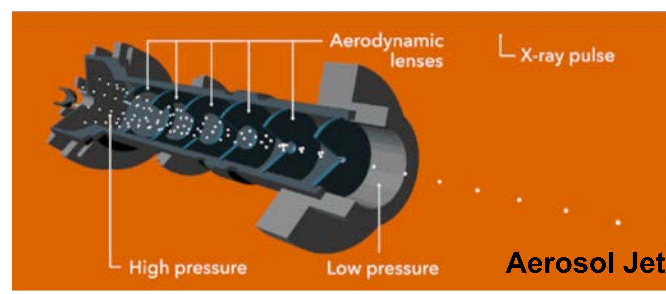
Optimized for each sample

LIQUIDS



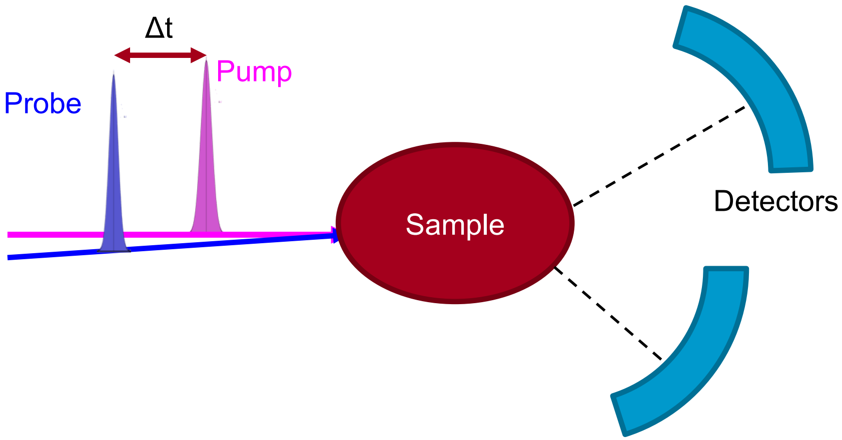






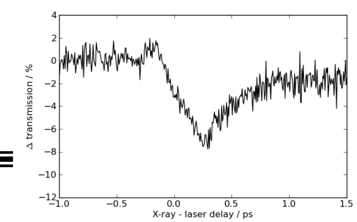
https://www6.slac.stanford.edu/news/2015-02-02-5-ways-put-tiny-targets-front-x-ray-laser.aspx

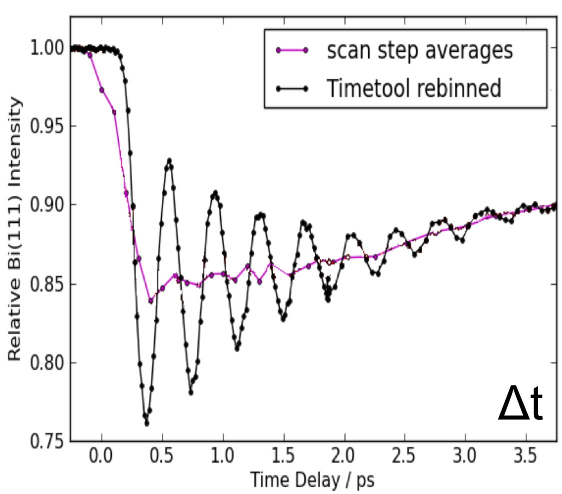
3.3) typ. Pump- Probe Experiment (c.f. Diling Zhu)

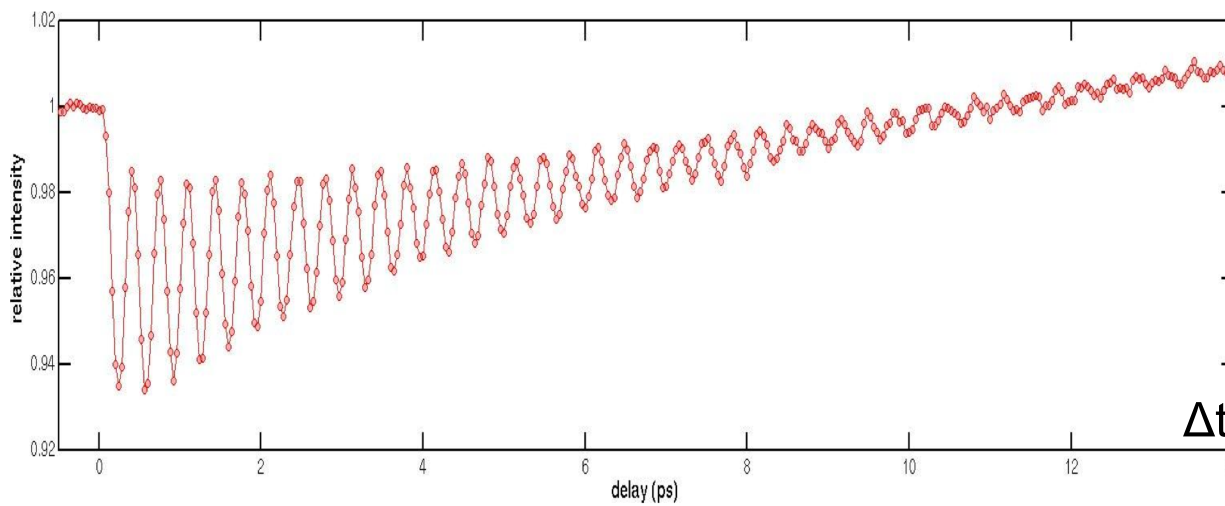


Pump-Probe : evolution of relative signal with X-ray probe at different time delays Δt after excitation (probe)

- **Reproducibility of the excited state**
- **Reproducibility of the sample if damaged**
- **Ability to synchronize two short pulses**
- **Correct for timing jitter**







Courtesy XPP (Zhu et al.)

4) What is coming next : LCLS-II and LCLS-II-HE

SLAC

1) Free Electron Lasers
    1) What is an FEL ?
    2) Status of FEL's worldwide vs Storage Rings

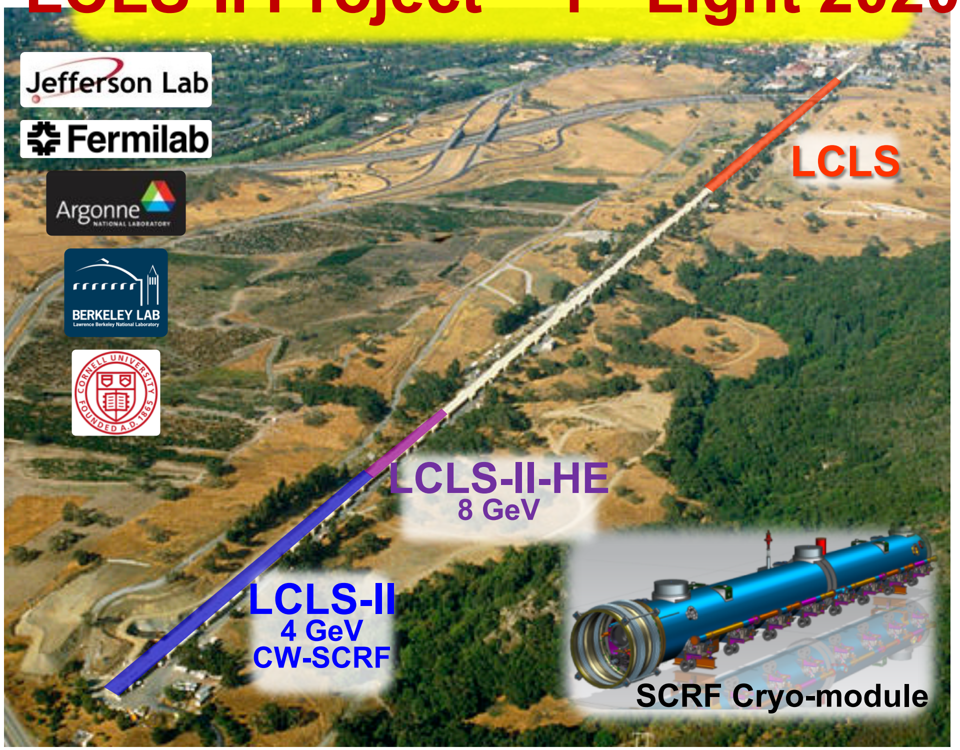
2) FELs vs. Synchrotron Sources:
    1) Understand the Peak Brilliance graphs
    2) LCLS
    3) In depth comparison from the experimentalist point of view

3) Experimental Strategies to BEST use FELs

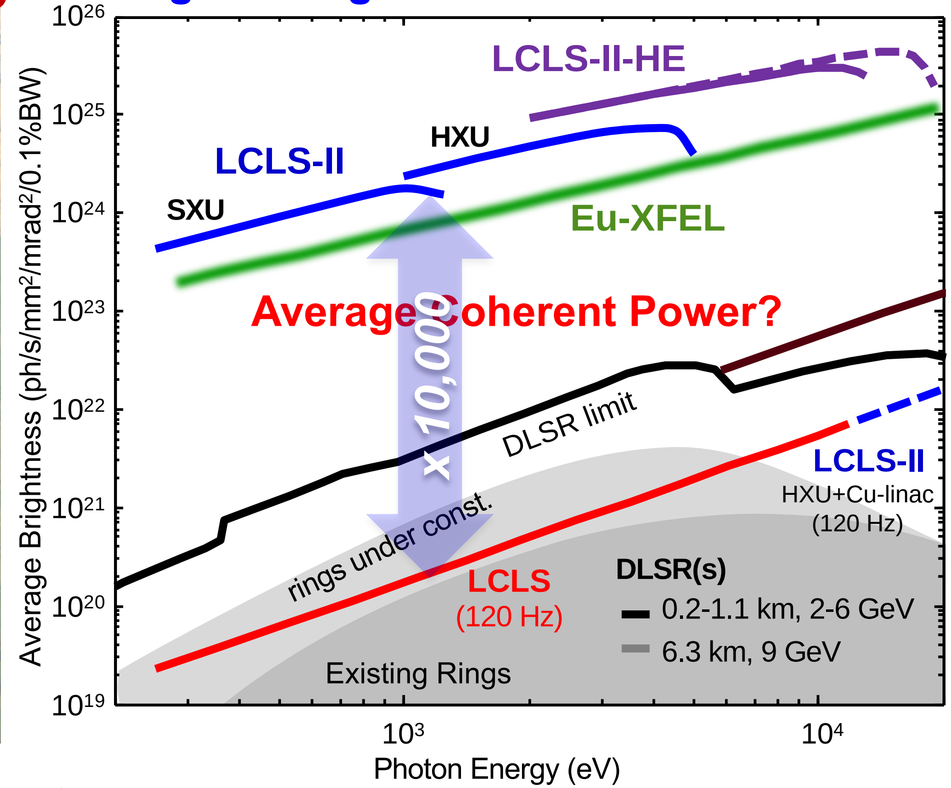
4) **What's coming next ?**

4) What is coming next : LCLS-II and LCLS-II-HE

LCLS-II Project – 1st Light 2020



High Average Coherent Power

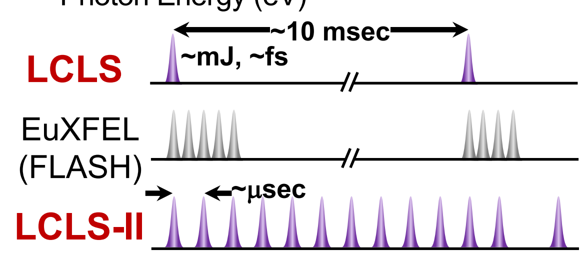


LCLS-II:

- CW-SCRF linac (4 GeV) in 1st km of linac
- Two new tunable undulators
- Repetition rate up to 1 MHz
- Photon energy reach – 25 keV (120 Hz)
- Stability, coherence (seeding)

LCLS-II-HE:

- More cryomodules
- Increase X-ray photon energy

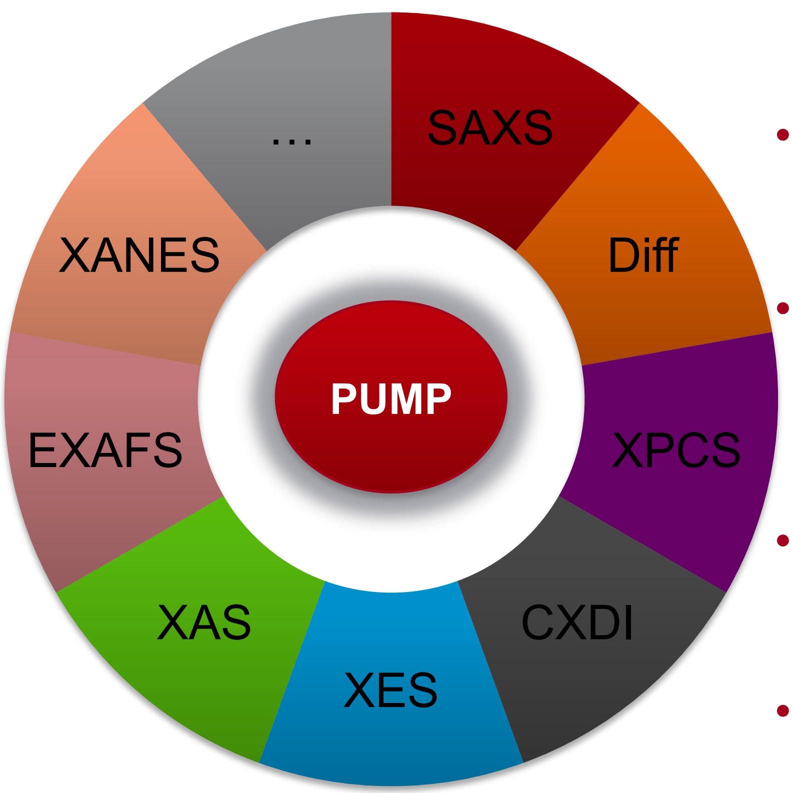


Free Electron Lasers : using X-rays for Science

SLAC

"Linac Coherent Light Source: the first five years", *Rev. Mod. Phys.* **88**, 015007 (2016)

Materials Science	Chemistry	Atomic & Molecular Dynamics	High Energy Density	Life Sciences



- **Relying on the long experience of synchrotron Storage Ring sources**
- Experiments use at least one of the FEL beam properties
- **Ideal for ultrafast dynamics, radiation sensitive samples, pump-probe (optical, THz, Field, etc.)**
- Some experiments use more than one technique simultaneously or sequentially
- Experimental descriptions by Diling Zhu *(next)*
