1 Operating instructions

1.1 Using this manual

- Read this operating manual completely before using the device for the first time. Observe the instructions for use of the accessories where applicable.
- This operating manual is part of the product. Please keep it in a place that is easily accessible.
- Enclose this operating manual when transferring the device to third parties.
- The current version of the operating manual for all available languages can be found on our webpage www.eppendorf.com/manuals.

1.2 Danger symbols and danger levels

1.2.1 Danger symbols

The safety instructions in this manual have the following danger symbols and danger levels:

	Biohazard		Explosive substances
<u>A</u>	Electric shock		Risk of crushing
	Hazard point	**	Material damage

1.2.2 Danger levels

DANGERWill lead to severe injuries or death.	
WARNING	May lead to severe injuries or death.
CAUTION	May lead to light to moderate injuries.
NOTICE	May lead to material damage.

1.3 Symbols used

2 Safety

2.1 Intended use

The Centrifuge 5804/5804 R/5810/5810 R is used for the separation of aqueous solutions and suspensions of different densities in approved sample tubes.

The Centrifuge 5804/5804 R/5810/5810 R is exclusively intended for use indoors. All country-specific safety requirements for operating electrical equipment in the laboratory must be observed.

2.2 User profile

The device and accessories may only be operated by trained and skilled personnel.

Before using the device, read the operating manual and the instructions for use of the accessories carefully and familiarize yourself with the device's mode of operation.

2.3 Application limits

2.3.1 Declaration concerning the ATEX directive (2014/34/EU)

DANGER! Risk of explosion.

- Do not operate the device in areas where explosive substances are handled.
- Do not use this device to process any explosive or highly reactive substances.
- Do not use this device to process any substances which may generate an explosive atmosphere.

Due to its design and the environmental conditions inside the device, the Centrifuge 5804/5804 R/5810/ 5810 R is not suitable for use in a potentially explosive atmosphere.

The device may only be used in a safe environment, such as in the open environment of a ventilated laboratory or a fume hood. The use of substances that may contribute to a potentially explosive atmosphere is not permitted. The final decision on the risks associated with the use of such substances lies with the user.

2.4 Information on product liability

In the following cases, the designated protection of the device may be affected. Liability for any resulting damage or personal injury is then transferred to the owner:

- The device is not used in accordance with the operating manual.
- The device is used outside of its intended use.
- The device is used with accessories or consumables that are not recommended by Eppendorf.
- The device is maintained or repaired by persons not authorized by Eppendorf AG.
- The user makes unauthorized changes to the device.

2.5 Warnings for intended use

2.5.1 Personal injury or damage to device

WARNING! Electric shock due to damage to the device or mains/power cord.

- Only switch on the device if the device and mains/power cord are undamaged.
- Only operate devices which have been installed or repaired properly.
- In case of danger, disconnect the device from the mains/power supply voltage. Disconnect the mains/power plug from the device or the earth/grounded socket. Use the isolating device intended for this purpose (e.g. the emergency switch in the laboratory).

WARNING! Lethal voltages inside the device.

If you touch any parts which are under high voltage you may experience an electric shock. Electric shocks cause injuries to the heart and respiratory paralysis.

- Ensure that the housing is closed and undamaged.
- Do not remove the housing.

• Ensure that no liquids can penetrate the device.

Only authorized service staff may open the device.

WARNING! Danger due to incorrect voltage supply.

- Only connect the device to voltage sources which correspond with the electrical requirements on the name plate.
- Only use earth/grounded sockets with a protective earth (PE) conductor.
- Only use the mains/power cord supplied.

WARNING! Damage to health due to infectious liquids and pathogenic germs.

- When handling infectious liquids and pathogenic germs, observe the national regulations, the biosafety level of your laboratory, the material safety data sheets, and the manufacturer's application notes.
- Use aerosol-tight sealing systems for the centrifugation of these substances.
- When working with pathogenic germs which belong to a higher risk group, more than one aerosol-tight bioseal must be used.
- Wear your personal protective equipment.
- For comprehensive regulations about handling germs or biological material of risk group II or higher, please refer to the "Laboratory Biosafety Manual" (source: World Health Organization, Laboratory Biosafety Manual, the current edition).

WARNING! Risk of injury when opening or closing the centrifuge lid.

There is a risk of crushing your fingers when opening or closing the centrifuge lid.

- Do not reach between the device and centrifuge lid when opening or closing the centrifuge lid.
- Do not reach into the locking mechanism of the centrifuge lid.
- Open the centrifuge lid fully to ensure that the centrifuge lid cannot slam shut.

11

WARNING! Risk of injury due to defective gas spring(s).

A defective gas spring is an insufficient support for the centrifuge lid. There is a risk of crushing fingers or limbs.

- Make sure that the centrifuge lid can be opened fully and that it will remain in this position.
- Regularly check all gas springs for their proper function.
- Have defective gas springs replaced immediately.
- Have gas springs replaced by a service technician every 2 years.

WARNING! Risk of injury from rotating rotor.

If the emergency release of the lid is operated, the rotor may continue to rotate for several minutes.

- Wait for the rotor to stop before activating the emergency release.
- To check, look through the monitoring glass in the centrifuge lid.

WARNING! Risk of injury from chemically or mechanically damaged accessories. Even minor scratches and cracks can lead to severe internal material damage.

- Protect all accessory parts from mechanical damage.
- Inspect the accessories for damage before every use. Replace any damaged accessories.
- Do not use rotors, rotor lids, buckets or caps showing signs of corrosion or mechanical damage (e.g., deformations).
- Do not use any accessories which have exceeded their maximum service life.
- When inserting the buckets and rotors, ensure that they do not become scratched.

CAUTION! Poor safety due to incorrect accessories and spare parts.

The use of accessories and spare parts other than those recommended by Eppendorf may impair the safety, functioning and precision of the device. Eppendorf cannot be held liable or accept any liability for damage resulting from the use of accessories and spare parts other than those recommended, or from the improper use of such equipment.

• Only use accessories and original spare parts recommended by Eppendorf.

NOTICE! Damage to device from spilled liquids.

- 1. Switch off the device.
- 2. Disconnect the device from the mains/power supply.
- 3. Carefully clean the device and the accessories in accordance with the cleaning and disinfection instructions in the operating manual.
- 4. If a different cleaning and disinfecting method is to be used, contact Eppendorf AG to ensure that the intended method will not damage the device.

NOTICE! Damage to electronic components due to condensation.

Condensate may form in the device when it has been transported from a cool environment to a warmer environment.

 After installing the device, wait for at least 4 h. Only then connect the device to the mains/ power line.

NOTICE! Buckets swinging out in the wrong direction.

If the wrong adapters are used for 500 mL Corning flasks, the buckets of the swing-bucket rotor may swing out in the wrong direction. If the buckets swing out in the wrong direction, this may lead to sample loss or damage to the centrifuge.

 Therefore, only use the Eppendorf adapters for 500 mL Corning flasks intended for this purpose.

2.5.2 Incorrect handling of the centrifuge

₩ F

NOTICE! Damage from knocking against or moving the device during operation. If the rotor hits the rotor chamber wall, it will cause considerable damage to the device and rotor.

• Do not move or knock against the device during operation.

2.5.3 Incorrect handling of the rotors

WARNING! Risk of injury from improperly attached rotors and rotor lids.

- Only centrifuge with the rotor and rotor lid firmly tightened.
- If unusual noises occur when the centrifuge starts, the rotor or rotor lid may not be properly secured. Immediately press the **start/stop** key to stop centrifuging.

CAUTION! Risk of injury due to asymmetric loading of a rotor.

- Always load all positions of a swing-bucket rotor with buckets.
- Load buckets symmetrically with identical tubes or plates.
- Only load adapters with suitable tubes or plates.
- Always use tubes or plates of the same type (weight, material/density and volume).
- Check that loading is symmetrical by balancing the adapters and tubes or plates used with a balance.

12

13

CAUTION! Risk of injury from overloaded rotor.

The centrifuge is designed for the centrifugation of material with a maximum density of 1.2 g/mL at maximum speed and filling volume and/or load.

• Do not exceed the maximum load of the rotor.

CAUTION! Risk of injury due to chemically damaged rotor lids or caps.

Transparent rotor lids or caps made from PC, PP or PEI may loose their strength under the impact of organic solvents (e.g., phenol, chloroform).

- If rotor lids or caps have come into contact with any organic solvents, they should be cleaned immediately.
- Check the rotor lids and caps regularly for any damage and cracks.
- Immediately replace any rotor lids or caps which show cracks or milky stains.

NOTICE! Damage to rotors from aggressive chemicals.

Rotors are high-quality assemblies which can withstand extreme stresses. This stability can be impaired by aggressive chemicals.

- Avoid using aggressive chemicals such as strong and weak alkalis, strong acids, solutions with mercury ions, copper ions and other heavy metal ions, halogenated hydrocarbons, concentrated saline solutions and phenol.
- If it is contaminated by aggressive chemicals, clean the rotor and especially the rotor bores immediately using a neutral cleaning agent.
- Due to the manufacturing process, color variations may occur on PTFE coated rotors. These color variations do not affect the service life or resistance to chemicals.

NOTICE! If handled incorrectly, the rotor may fall.

The swing-bucket rotor may fall if the buckets are used as handles.

- Remove the buckets before inserting and/or removing a swing-bucket rotor.
- Always use both hands to carry the rotor cross.

NOTICE! If handled incorrectly, the rotor may fall.

- Always use both hands to pick up the F-35-48-17 rotor.
- In order to hold the rotor safely, you may have to remove 3 to 4 sleeves from the opposite outer row.

2.5.4 Extreme strain on the centrifugation tubes

CAUTION! Risk of injury from overloaded tubes.

- Note the loading limits specified by the tube manufacturer.
- Only use tubes which are approved by the manufacturer for the required *g*-force (rcf).

¥₽

NOTICE! Risk from damaged tubes.

Damaged tubes must not be used, as this could cause further damage to the device and the accessories and sample loss.

• Before use, visually check all of the tubes for damage.

NOTICE! Danger from open tube lids.

Open tube lids can break off during centrifugation and damage the rotor and the centrifuge.

• Carefully seal all tube lids before centrifuging.

NOTICE! Damage to plastic tubes from organic solvents.

The strength of plastic tubes is reduced when organic solvents (e.g., phenol, chloroform) are used, which will damage the tubes.

• Note the manufacturer's information on the chemical resistance of the tubes.

NOTICE! Micro test tubes heat up.

In non-refrigerated centrifuges, the temperature in the rotor chamber, rotor and sample may increase to above 40 °C, depending on the run time, *g*-force (rcf) / speed and ambient temperature.

- > Please note that this will reduce the centrifugation stability of the micro test tubes.
- Please note the temperature resistance of the samples.

NOTICE! Danger due to deformed or brittle tubes. Autoclaving at excessive temperatures can lead to tubes made from plastic becoming brittle and deformed.

This could cause damage to the device and the accessories and sample loss.

- Observe the temperatures specified by the manufacturer when autoclaving tubes.
- Do not use brittle or deformed rechargeable tubes.

1	Operating manual
1	Set of fuses
1	Condensation water tray

- Check whether the delivery is complete.
- Check all parts for any transport damage.
- To safely transport and store the device, retain the transport box and packing material.

3.3 Features

The versatile centrifuge has a capacity of maximum 4×250 mL (Centrifuge 5804/5804 R) or 4×750 mL (Centrifuge 5810/5810 R) and reaches a maximum of 20913 \times g/14000 rpm. The versatility is reflected in the available rotor options. You can select between 12 (Centrifuge 5804/5804 R) or 16 (Centrifuge 5810/5810 R) different rotors to centrifuge the following tubes for your various applications:

- Micro test tubes (0.2 mL to 5.0 mL)
- PCR strips
- Microtainers
- Spin columns
- Cryogenic tubes
- Conical tubes (15 mL/50 mL)
- Bottles (175 mL to 750 mL)
- Various tubes (3 mL to 120 mL)
- Microplates
- PCR plates
- Deepwell plates (max. height of 29 mm)
- Slides (with CombiSlide adapter)
- Cell-culture flasks

Handling the centrifuge is facilitated by:

- Low access height of 29 cm for loading and unloading the rotors
- · Automatic rotor detection with rotational speed limit
- Automatic rotor imbalance detection
- Clear digital display

All centrifuges in these series have 35 program slots for user-defined settings and 10 different acceleration and braking ramps.

Adapter-specific manual radius adjustment guarantees maximum RCF accuracy.

The Centrifuge 5804 R/5810 R has an additional temperature control function for centrifugation between -9°C and 40°C. Use the **FastTemp** function to start a temperature control run without samples to adjust the rotor chamber incl. rotor, buckets and adapters quickly to the set temperature. Continuous cooling maintains the temperature after the run has been completed – your samples stay cool.

3.4 Name plate

Fig. 3-2: Eppendorf AG device identification (example)

- 1 Maximum density of the material for centrifuging
- 2 Maximum kinetic energy
- 3 Maximum speed
- 4 Serial number
- 5 Product name
- 6 Rated voltage
- 7 Rated frequency
- 8 Maximum rated current

- 9 Maximum rated power
- 10 Information on the refrigerant (refrigerated centrifuges only)

FC	Certification mark for electromagnetic compatibility according to the Federal Communications Commission, USA
Ø	Certification mark for compliance with "China-RoHS" thresholds according to SJ/T 11364 Marking for the restriction of the use of hazardous substances in electrical and electronic products standard, People's Republic of China

Tab. 3-1: Approval marks and symbols (device-specific)

4 Installation4.1 Selecting the location

WARNING! Danger due to incorrect voltage supply.

- Only connect the device to voltage sources which correspond with the electrical requirements on the name plate.
- Only use earth/grounded sockets with a protective earth (PE) conductor.
- Only use the mains/power cord supplied.

NOTICE! If an error occurs, any objects in the immediate proximity of the device may become damaged.

- In accordance with the recommendations of EN 61010-2-020, leave a safety clearance of 30 cm around the device during operation.
- Please remove all materials and objects from this area.

₩£

NOTICE! Damage due to overheating.

- Do not install the device near heat sources (e.g. heating, drying cabinet).
- Do not expose the device to direct sunlight.
- Ensure unobstructed air circulation. Maintain a clearance of at least 30 cm around all ventilation gaps.

NOTICE! Radio interference.

For devices with Class A noise emission in accordance with EN 61326-1/EN 55011, the following applies: This devices has been developed and tested in accordance with CISPR 11 Class A. The device may cause radio interference in domestic environments and is not intended for use in residential areas. The device cannot ensure adequate protection of radio reception in residential areas and domestic environments.

• If necessary, take appropriate measure to eliminate the interferences.

Mains/power connection for centrifuges: The operation of the centrifuge is only permitted in a building installation which complies with the applicable national regulations and standards. In particular, it needs to be ensured that there are no prohibited loads on the supply lines and assemblies that are located before the internal protection of the device. This can be ensured by additional circuit breakers or other suitable fuse elements in the building installation.

The mains/power switch and the disconnecting device of the mains/power line must be easily accessible during operation (e.g. a residual current circuit breaker).

Select the location of the device according to the following criteria:

- Mains/power connection in accordance with the name plate
- Minimum distance to other devices and walls: 30 cm
- Resonance free table with horizontal even work surface
- The surrounding area must be well ventilated.
- The location is protected against direct sunlight.
- Do not use this device near strong electromagnetic sources (e.g. unshielded high frequency sources) as they could impede proper functioning of the device.

4.2 Preparing installation

CAUTION! Risk of injury due to lifting and carrying of heavy loads The device is heavy. Lifting and carrying the device can lead to back injuries.

- Transport and lift the device with an adequate number of helpers only.
- Use a transport aid for transporting the device.

Perform the following steps in the sequence described.

- 1. Open the box.
- 2. Remove the covering cardboard.
- 3. Remove the accessories.
- 4. Lift the device by the underside in the vicinity of the device feet and place it directly on a suitable lab bench.

4.3 Installing the instrument

WARNING! Danger due to incorrect voltage supply.

- Only connect the device to voltage sources which correspond with the electrical requirements on the name plate.
- Only use earth/grounded sockets with a protective earth (PE) conductor.
- Only use the mains/power cord supplied.

NOTICE! Centrifuge 5804 R/5810 R: Compressor damage after improper transport.

- After installation, wait 4 hours before switching on the centrifuge.
- 1. Allow the device to warm up for at least 3 hours (5804/5810) or 4 hours (5804 R/5810 R) to the ambient temperature to prevent damage to the electronic components from condensation and damage to the compressor (only 5804 R/5810 R).

2. Check that the mains/power supply voltage and mains/power frequency match the requirements on the name plate.

Centrifuge 5804 R/5810 R with mains/power supply voltage 120 V: See also the notes on the mains/ power supply at the end of this chapter.

- 3. Connect the centrifuge to the mains/power line and switch it on using the mains/power switch on the right side of the device.
 - The open key lights up.
 - The display is illuminated.
- 4. Open the centrifuge lid using the **open** key.
- 5. Use the information included in the delivery package to check that the delivery is complete.
- 6. Check all parts for any transport damage.
- 7. Only 5804 R/5810 R: Insert the condensation water tray at the front of the device into the provided holder.

Tab. 4-1:Centrifuge 5804 R/5810 R with 120 V mains/power supply voltage in two versions15 A IEC power cable20 A version

- Conventional IEC power cable.
- Connection to standard socket (120 V/15 A).
- Standard cooling performance:
 - Increased minimum achievable temperatures at maximum speed of centrifugation.
 - Slower cooling down to set temperature.

- Mains/power cord fitted permanently to the device.
- Special mains/power connection required (120 V/20 A).
- Increased cooling performance.
 - Lower temperatures at maximum speed of centrifugation possible.
 - Quicker cooling down to set temperature.

5 Operation5.1 Operating controls

Fig. 5-1: Operating controls of the Centrifuge 5804 R/5810 R and the Centrifuge 5804/5810

- 1 short key Short run centrifugation
- 2 Status of At set rpm function
 ✓: Start of time counting when reaching 95% of the preset *g* force (rcf) or speed (rpm)
 ✓: Start of time counting immediately.
- 3 Indicate speed (rpm), g force (rcf) * and radius setting Θ .
- 4 Symbol for acceleration \checkmark and braking \sim
- 5 Arrow keys Set parameters and values Keep the arrow key pressed: quick setting
- 6 open key Release lid
- **7** start/stop key Start or stop centrifugation

8 time key

Select runtime setting Adjust the centrifugation time using the arrow keys

9 speed key

Select the speed of centrifugation and adjust it using the arrow keys

10 prog key

Press the **prog** key: Load program Keep the **prog** key pressed for 2 s: Save current parameters

11 temp key

Only 5804 R/5810 R: Select the temperature and adjust it using the arrow keys

12 Standby ⁽¹⁾ key

LED lights green: centrifuge is operational LED lights red: standby mode is active

13 fast temp key

Start **Only 5804 R/5810 R:** temperature control run FastTemp

5 Symbol flashes during centrifugation

7 Centrifugation time

6 Symbol for acceleration \checkmark and deceleration \sim

Fig. 5-2: Display of the Centrifuge 5804 R/5810 R and the Centrifuge 5804/5810

- 1 Only 5804 R/5810 R: temperature
- 2 Program number
- 3 Symbol for *g* force (rcf)
- 4 *g* force (rcf)/speed (rpm)

Display of actual value and set value

- Rotor stop: display of set values
- Centrifugation: display of actual values

Display set value during centrifugation: press the **temp**, **time** or **speed** keys. The set value is displayed for 2.5 s.

5.2 Preparing for centrifugation

5.2.1 Switching on the centrifuge

- 1. Switch on the centrifuge using the mains power switch or the $\ensuremath{\mathbb{O}}$ standby key.
- 2. Open the closed centrifuge lid by pressing the $\ensuremath{\textit{open}}$ key.

The parameter settings of the last run are displayed.

5.2.2 Inserting the rotor

Prerequisites

When attaching the rotor to or releasing it from the motor shaft, the temperature of the rotor and motor shaft must be within the range of $10 - 30^{\circ}$ C.

NOTICE! If handled incorrectly, the rotor may fall.

- Always use both hands to pick up the F-35-48-17 rotor.
- In order to hold the rotor safely, you may have to remove 3 to 4 sleeves from the opposite outer row.

• **Swing-bucket rotors:** remove the buckets before inserting and/or removing the rotor. Use both hands to pick up the rotor cross.

- 1. Place the rotor vertically on the motor shaft.
- 2. Insert the supplied rotor key into the rotor nut.

Rotor cross A-4-81/S-4-104: use the special rotor key.

3. Turn the rotor key **clockwise** until the rotor nut is firmly tightened.

5.2.3 Automatic rotor detection

The centrifuge has automatic rotor detection. It detects a newly inserted rotor and displays its maximum permitted speed for approx. 2 s. g-force (rcf) and speed (rpm) are automatically limited to the maximum permitted value for the rotor.

In order to trigger the rotor detection,

• start turning the rotor by hand and press the **start/stop** key.

The maximum permissible rotor speed is displayed. g-force (rcf) and speed (rpm) are automatically limited to the maximum permissible value for the rotor.

Rotor detection can also be triggered by short spin centrifugation:

• Press the short key until the maximum permitted speed for the rotor appears in the display.

If you start centrifuging immediately after a rotor change, the centrifuge has not carried out an automatic rotor detection yet. The speed set for the previous rotor may exceed the maximum permitted speed for the new rotor. In this case, the centrifuge stops after the automatic rotor detection and displays *SPEED*. The new maximum permissible speed is displayed.

Only select programs only after the automatic rotor detection.

You can then restart the centrifuging with these settings or adjust the speed as necessary.

- After each rotor change, check whether the new rotor is detected by the device.
- Check the set g-force (rcf) and/or speed (rpm) and adjust it if required.

5.2.4 Loading the rotor

CAUTION! Risk of injury due to asymmetric loading of a rotor.

- Always load all positions of a swing-bucket rotor with buckets.
- Load buckets symmetrically with identical tubes or plates.
- Only load adapters with suitable tubes or plates.
- Always use tubes or plates of the same type (weight, material/density and volume).
- Check that loading is symmetrical by balancing the adapters and tubes or plates used with a balance.

CAUTION! Risk from damaged or overloaded tubes.

 When loading the rotor, observe the safety instructions on dangers as a result of overloaded or damaged tubes.

The device automatically detects imbalances during operation and stops the run immediately with an error message and a signal tone.

• Check the load, balance the tubes and restart the run.

5.2.4.1 Fixed-angle rotors

Rotor lid

- Fixed-angle rotors may only be operated with the appropriate rotor lid in each case. This is clearly shown by the identical rotor name labeling on the rotor and on the rotor lid.
- To carry out an aerosol-tight centrifugation, an aerosol-tight rotor must be used in combination with the corresponding rotor lid or cap.

To load the rotor, proceed as follows:

- 1. Check the maximum load (adapter, tube and contents) per rotor bore.
 - The information about this can be found on the rotor and in this operating manual (see Rotors on p. 65).
- 2. Load rotors and adapters only with the tubes intended for them.
- 3. Insert tubes opposite each other in pairs into the rotor bores. To ensure symmetric loading, tubes that are arranged opposite each other must be of the same type and contain the same filling quantity.

28

29

To minimize weight differences between filled sample tubes, we recommend balancing with a balance. This will reduce wear on the drive and also reduce operating noise.

4. Attach and tighten the rotor lid.

5.2.4.2 Swing-bucket rotors

Prerequisites

- A rotor, bucket and adapter combination approved by Eppendorf.
- The buckets are sorted by weight category. Buckets located opposite each other must belong to the same weight category. This is engraved in the groove on the side: e.g., *68* (the last 2 digits in grams). Please specify the corresponding weight class for reorders including buckets.
- Matching and tested tubes and plates.
- Do not remove the middle guiding elements of the modular adapters of the rectangular buckets in order, e.g., to increase capacity through multi-level centrifugation.

NOTICE! Damage to adapters due to incorrect stacking.

 Stack the adapters in rectangular buckets in a closed row from the bottom of the bucket only. Do not leave any gaps between the modules.

NOTICE! Filling the plates too high can cause overflowing.

During the run the meniscuses in the tubes along the edges of the plates are at an angle. This is due to the centrifugal forces and cannot be avoided.

Fill the plate wells to a maximum of 2/3 of the maximum filling volume.

To load the rotor, proceed as follows:

1. Make sure that the bucket grooves are clean and lightly grease them with pivot grease (int. order no.: 5810 350.050/North America: 022634330).

Dirty grooves and pivots prevent the buckets from swinging out evenly.

2. Hang the buckets into the rotor.

All rotor positions must be equipped with buckets.

- 3. Check to see if all buckets are completely hung and can freely swing out.
- 4. For rotor A-4-81, insert the adapter into the buckets such that the black sealing clamp points to the **Eppendorf** labeling on the bucket.

Ensuring free swinging of the buckets

5. To check whether bottles, plates or tubes can swing freely, swing buckets manually with empty tubes. The tubes must not come into contact with the rotor cross.

Checking the swinging direction

- 6. To check whether the buckets including their load swing with the bottom in the direction of the rotor chamber wall, start turning the rotor cross anti-clockwise.
- 7. Check and observe the maximum load per bucket (adapter, tube or plate and contents) and the loading height.

The information about this can be found on the rotor and in this operating manual (see Rotors on p. 65).

8. Load the buckets symmetrically.

Fig. 5-3: Incomplete, but symmetric loading of the buckets. All pivots of the rotor have to be evenly loaded.

Fig. 5-4: Symmetrical loading of the plates.

The plate loading shown on the right-hand side is incorrect, as the buckets will not swing properly. The same principle also applies to the loading of rotor A-4-81-MTP/Flex with 4 plates. The plates have a small amount of play in the buckets.

9. Check the loading of the buckets.

5.2.4.3 Rotor S-4×750: Equipping the adapter with vessels > 119 mm

NOTICE! Broken glass due to incorrect equipping.

If the tubes in a bucket are too long, the swinging tubes will touch the rotor cross and may get damaged or destroyed.

- Equip buckets of swing-bucket rotors in such a way that they can swing out freely.
- If necessary, load the inner bores of the adapter only.
- If using tubes with a length > 100 mm: always perform a manual swing-out test.

If the adapter 16×75 mm – 100 mm (order number 5825 736.001) is equipped with vessels > 119 mm in length, e.g., BD 8 mL Vacutainer, there is a risk of glass breakage.

Fig. 5-5: Loading the adapter $16 \times 75 - 100$ mm with vessels >119 mm in length.

• Only load the inner bores.

5.2.4.4 Mixed loading with buckets

Mixed loading of swing-bucket rotors with buckets and plate buckets is possible if these are intended for the rotor. Buckets or plate buckets that are located opposite each other must be of the same type.

Fig. 5-6: Mixed loading of rotors

Rotor	Mixed loading
S-4-104	 2 buckets for plates (open buckets or plate buckets) 2 round buckets
A-4-81/A-4-81-MTP/Flex	 2 buckets (MTP or DWP buckets) 2 buckets for conical tubes 2 rectangular buckets
A-4-44	 2 rectangular buckets 2 buckets for conical tubes

NOTICE! Rotor damage due to mixed loading.

If you load the rotors A-4-62 and A-4-62-MTP with a mixed equipment, the rotors are damaged during centrifugation.

- Load all positions of the A-4-62 and A-4-62-MTP rotors with the same buckets.
- Always load all 4 positions of the swing-bucket rotors.
- Check the loading of the buckets.

5.2.5 Closing the centrifuge lid

WARNING! Risk of injury when opening or closing the centrifuge lid. There is a risk of crushing your fingers when opening or closing the centrifuge lid.

- Do not reach between the device and centrifuge lid when opening or closing the centrifuge lid.
- Do not reach into the locking mechanism of the centrifuge lid.
- Open the centrifuge lid fully to ensure that the centrifuge lid cannot slam shut.
- 1. Check the correct attachment of the rotor and rotor lid.

2. Push down the centrifuge lid until the lid latch engages and the lid is automatically closed. The centrifuge will close automatically.

The **open** key lights up blue. **■** appears on the display.

5.3 Cooling (only 5804 R/5810 R)

5.3.1 Temperature adjustment

- Select the temperature setting using the **temp** key.
- ▶ Set the temperature using the arrow keys between -9 °C and +40 °C.

5.3.2 Temperature display

If the rotor is stopped:Set temperatureDuring centrifugation:Actual temperature

5.3.3 Temperature monitoring

After the set temperature has been reached, the centrifuge reacts to temperature deviations during centrifugation as follows:

Deviation from set value	Action
± 3 °C	Temperatures on the display are flashing.
± 5 °C	Periodic warning tone. Centrifugation is stopped automatically.

5.3.4 FastTemp

This function can be used to start a temperature control run directly without samples with a rotor and temperature-specific speed in order to quickly adjust the rotor chamber, including the rotor, buckets and adapters, to the previously set temperature.

Prerequisites

- The centrifuge is switched on.
- The rotor and rotor lid are attached properly.
- The centrifuge lid is closed.
- Temperature and g-force (rcf)/speed (rpm) for the centrifugation are set (see *Centrifuging on p. 37*).
- 1. Press the **fast temp** key.

The following appears on the display from left to right: Actual temperature value, *FT*, g-force (rcf)/ speed (rpm) and -- (time).

The temperature control run ends automatically when the set temperature is reached. A periodic signal tone sounds.

2. Press the **start/stop** key to end the temperature control run early.

After the set temperature has been reached and the temperature control run is complete, the centrifuge keeps the rotor chamber with the centrifuge lid closed at the set target temperature if the temperature is below the ambient temperature. However, independent of the target temperature, 4 °C must be met via this continuous cooling in order to prevent the rotor chamber from freezing.

The centrifuge stops the cycle automatically if the rotor or the buckets have reached the set temperature. Therefore, there may be a delay of approx. 30 min between the display of the set temperature and the automatic end of the temperature control run.

When using aerosol-tight buckets, always carry out a FastTemp run at low temperatures without a cap. There is a danger otherwise of the caps becoming fixed by suction due to a vacuum. Do not pull on the sealing clamps or hooks to loosen the cap. Adjust the temperature of the buckets to room temperature so that the caps can be removed easily.

5.3.5 Continuous cooling

If the rotor stops, the rotor chamber will be maintained at the target temperature if the following requirements have been met:

- The centrifuge is switched on.
- The centrifuge lid is closed.
- The set temperature is lower than the ambient temperature.
- The centrifuge is not in standby mode.

During continuous cooling the following applies:

- The set and actual temperature are displayed alternately.
- Irrespective of the set temperature, the temperature does not go below 4 °C to prevent the rotor chamber from freezing and from increased condensation in the device.
- The temperature adjustment takes longer because the rotor is not rotating.

To end continuous cooling, open the centrifuge lid or press the standby key.

If the centrifuge is not used for more than 8 hours, the continuous cooling is switched off automatically (ECO shut-off). The device then switches to standby mode. This protects against ice formation in the rotor chamber and increased condensation in the device. With **FastTemp** you can quickly reach the desired temperature again (see p. 34).

You can also change from automatically switching off continuous cooling after 8 hours (ECO shut-off) to unlimited continuous cooling.

NOTICE! Ice formation and compressor overheating during continuous cooling.

- Switch off the centrifuge regularly to eliminate any ice formation due to defrosting.
- Regularly remove condensation water from the rotor chamber using a soft, absorbent cloth.
- Empty and clean the condensation water tray regularly.
- 1. When the centrifuge lid is opened, press the **temp** and **prog** keys simultaneously. *Standby 8h* appears in the display.
- Press the fast temp key immediately.
 Endless operation for continuous cooling is activated. *Standby endless* appears in the display.
- 3. To change back to *Standby 8h*, repeat the process.

5.4 Aerosol-tight centrifugation

WARNING! Damage to health due to limited aerosol tightness with incorrect rotor/rotor lid combination.

Aerosol-tight centrifugation is guaranteed only if the rotors and rotor lids intended for this purpose are used. The designation of aerosol-tight fixed-angle rotors always starts with **FA**. The aerosol-tight rotors and rotor lids of this centrifuge are additionally marked with a red ring on the rotor and a red rotor lid screw.

Aerosol-tight swing-bucket rotors are marked with AT (aerosol-tight).

- Always use rotors and rotor lids marked aerosol-tight together for aerosol-tight centrifugation. The details specifying in which centrifuge you may use the aerosol-tight rotors and rotor lids can be found on the rotor and on the top of the rotor lid.
- Only use aerosol-tight rotor lids in combination with rotors which are marked on the rotor lid.
- Only use aerosol-tight buckets with the corresponding caps.

WARNING! Damage to health as a result of limited aerosol tightness and incorrect usage. Mechanical stresses and contamination by chemicals or other aggressive solvents may impair the aerosol tightness of the rotors and rotor lids. Autoclaving at excessive temperatures can lead to tubes, adapters and rotor lids becoming brittle and deformed.

- Check the integrity of the seals of the aerosol-tight rotor lids or caps before each use.
- Only use aerosol-tight rotor lids or caps if the seals are undamaged and clean.
- Do not exceed temperatures of 121°C or a time of more than 20 min. while autoclaving.
- After each proper autoclaving process (121 °C, 20 min.), coat the threads of the rotor lid screw with a thin layer of pivot grease (order no. Int. 5810 350.050, North America 022634330).
- Replace aerosol-tight rotor lids without replaceable seals after 50 autoclaving cycles.
- For QuickLock rotor lids, only the seal must be replaced after 50 autoclaving cycles.
- Replace aerosol-tight rotor caps after 50 autoclaving cycles.
- Never store aerosol-tight rotors or buckets closed.

The aerosol tightness of rotors, rotor lids, buckets and caps has been tested and certified according to Annex AA of IEC 61010-2-020.

5.4.1 Aerosol-tight centrifugation in a fixed-angle rotor

Aerosol-tight fixed-angle rotors have a QuickLock rotor lid.

- Replace aerosol-tight rotor lids after 50 autoclaving cycles.
- Replace the seals of QuickLock rotor lids after 50 autoclaving cycles.
- Replace damaged seals of QuickLock rotor lids.

5.4.2 Aerosol-tight centrifugation in a swing-bucket rotor

- For aerosol-tight centrifugation in a swing-bucket rotor, use buckets with aerosol-tight caps.
- Replace aerosol-tight caps after 50 autoclaving cycles.
5.5 Centrifuging

CAUTION! Danger due to incorrectly-loaded rotors and damaged/overloaded tubes!

 Before commencing centrifugation, follow the safety instructions relating to risks from asymmetrically loaded and/or overloaded rotors and from overloaded, damaged and/or open tubes.

WARNING! Risk of injury from improperly attached rotors, rotor lids and caps.

- Only centrifuge with firmly tightened rotor and rotor lid as well as with inserted buckets and correctly closed caps.
- If unusual noises occur when the centrifuge starts, the rotor, rotor lid or a cap may not be properly secured. Immediately press the start/stop key to stop centrifuging.

Each of the centrifuging variants described here must be preceded by the preparation described above (see *Preparing for centrifugation on p. 26*).

5.5.1 Centrifugation with time setting

Perform the following steps in the sequence described.

 Speed (rpm) setting: press once. g-force (rcf) setting: press repeatedly until the symbol * additionally appears in the display. The displayed g-force (rcf)/speed (rpm) flashes and can be set with the arrow keys. For the g-force (rcf) setting also check the set radius (see *Rotors on p. 65*), (see *Setting the radius on p. 41*).

2. Use the arrow keys to set the g-force (rcf)/speed (rpm). The new set value appears in the display.

3. Select the runtime setting and set it with the arrow keys.

4. Only 5804 R/5810 R: Select the temperature setting and set it with the arrow keys.

- 5. Start centrifugation.
- **■** blinks in the display when the rotor is running.
- Only 5804 R/5810 R: The current temperature will be displayed.
- The current g-force (rcf)/speed (rpm) of the rotor is displayed.
- You can display all set values for 2.5 s by pressing a parameter key (Temp, Speed, Time).
- You can terminate centrifugation early by pressing the start/stop key.
- The centrifuge automatically stops after the set time has elapsed.
- The elapsed centrifugation will be shown in a blinking display during the braking process.

6. Open the centrifuge lid as soon as the key lights up.

During the run you can modify the total run time, the temperature (only Centrifuge 5804 R/ 5810 R) and the g-force (rcf)/speed (rpm) as well as the acceleration time and the braking time. The new parameters are adopted immediately. The time which has already elapsed is considered in the newly set total run time. Please note that the shortest new total run time that can be set is the elapsed time plus 2 minutes.

5.5.2 Centrifuging in continuous operation

Perform the following steps in the sequence described.

1. Set the g-force (rcf)/speed (rpm) and possibly the temperature as previously described (see p. 37).

2. Select the runtime setting.

3. Set continuous operation below 1 min or above 99 min. In the display ∞ indicates continuous run.

start	
stop	

- 4. Start centrifugation.
 - **■** blinks in the display when the rotor is running.
 - If the centrifuge runs for more than 99 min, 99. appears in the display.
 - Only 5804 R/5810 R: The current temperature will be displayed.
 - The current g-force (rcf)/speed (rpm) of the rotor is displayed.

- 5. End centrifugation after the desired time.
- The elapsed centrifugation will be shown in a blinking display during the braking process.

6. Open the centrifuge lid as soon as the key lights up.

5.5.3 Short spin centrifugation

You can carry out a short spin centrifugation with the currently set or with the maximum g-force (rcf)/ speed (rpm) of the used rotor.

5.5.3.1 Setting the speed option

Press and hold down the key with the centrifuge lid open.
 One of the following options appears in the display:
 rpm max: the rotor accelerates up to its maximum g-force (rcf)/speed (rpm) (see *Rotors on p. 65*).
 200 - *rpm*: the rotor only accelerates up to its set g-force (rcf)/speed (rpm).

shor

 Press and hold down the key for more than 3 s with the centrifuge lid open to switch between the *rpm max* and 200 - *rpm* options. The selected option appears in the display for 2 s and is retained.

5.5.3.2 Starting the short spin centrifugation

- 1. If 200 *rpm* is set, set the g-force (rcf)/ speed (rpm) for the short spin centrifugation (see p. 37).
- 2. Only 5804 R/5810 R: set temperature (see p. 37).
- 3. Keep the key pressed to start the short spin centrifugation.
- *SH* appears in the display while the rotor is running.
- The time is counted upwards in seconds.

4. Release to end the short spin centrifugation.

open

During the braking process, you can restart the centrifugation up to two times by pressing the **short** key again.

5. Open the centrifuge lid as soon as the key is illuminated.

5.5.4 Removing the rotor

Prerequisites

When attaching the rotor to or releasing it from the motor shaft, the temperature of the rotor and motor shaft must be within the range of 10 - 30 °C.

NOTICE! If handled incorrectly, the rotor may fall.

The swing-bucket rotor may fall if the buckets are used as handles.

- Remove the buckets before inserting and/or removing a swing-bucket rotor.
- Always use both hands to carry the rotor cross.

NOTICE! If handled incorrectly, the rotor may fall.

- Always use both hands to pick up the F-35-48-17 rotor.
- In order to hold the rotor safely, you may have to remove 3 to 4 sleeves from the opposite outer row.
- 1. Turn the rotor nut **counterclockwise** using the rotor key.
- 2. Remove the rotor by lifting it vertically.
- 3. **Only 5804 R/5810 R:** Switch off the centrifuge after use and empty the condensation water tray. Leave centrifuge lid fully opened and protect it against closing.

5.5.5 Standby mode

• You can switch between standby mode and ready state at any time when centrifugation is not performed by pressing the standby key.

Standby mode

- The display expires.
- The standby key lights red.
- Only 5804 R/5810 R: The rotor chamber is not cooled (see Continuous cooling on p. 34).

Ready state

- The centrifugation parameters are displayed.
- The standby key lights up in green.
- Only 5804 R/5810 R: The rotor chamber is cooled when the centrifuge lid is closed (see *Continuous cooling on p. 34*).

6 **Operating controls and function** 6.1 Setting the radius

When you control the rotational speed via the *q*-force (rcf, RCF), and not via the speed (rpm), the internal conversion of speed to q-force takes place by default with the largest radius of the used rotor. (see Rotors on *p.* 65). You can adapt this radius to an applied adapter:

1. Press several times until the \mathbf{O} symbol also appears in the display. The current radius flashes.

2. Set the new radius.
3. Wait for 3 seconds (if the rotor is stopped: 10 seconds). The changed *q*-force appears.

6.2 Setting the acceleration and braking times

You can set the acceleration and braking time in the levels 0 to 9 (see Tab. on p. 62). Level 9 is preset (shortest acceleration and braking time).

1. Press twice until the \checkmark symbol for acceleration level (accel) appears in the display.

2. Select acceleration level 0 to 9.

3. Press once until the \sim symbol for braking level (brake) appears in the display.

4. Select braking level 0 to 9.

Braking level (brake) 0 corresponds to free deceleration.

The device only shows the \checkmark and \sim symbols continually when levels 0 to 8 have been set.

6.3 Setting the start of run time (At set rpm)

The centrifuge can count down the set time either immediately from the start of centrifugation or only once 95% of the specified g-force (rcf)/speed (rpm) has been reached (At set rpm). The respective setting is indicated by the flashing triangle in the symbol above the display:

Preset time: the set time is counted down immediately after the start of centrifugation.

At set rpm: the set time is counted down once 95% of the specified g-force (rcf)/ speed (rpm) has been reached.

Prerequisites

The centrifuge lid is open.

Hold down this key for at least 4 s to switch between the two settings,

When pressing the key, both triangles of the symbol will flash in turn.

6.4 Saving the program

You can save the current centrifugation parameters and functions (*At set rpm*, acceleration and braking times and radius) under up to 35 program numbers.

Prerequisites

Rotor stop.

Press key twice.
 The first free program number appears with *P*... in the display.

3. Select the program number (1...9,A...Z).

4. Press and hold key for 2 seconds. *ok* appears in the display. The current centrifugation parameters and functions are saved under the selected program number.

When you want to overwrite a saved program, you have to delete it before saving the new parameters (see *Deleting the program on p. 43*).

42

6.5 Loading the program

Prerequisites

• Rotor stop.

1. Press once.

Program number flashes:

- 0: centrifugation parameters and functions of the last run.
- 1...9, A...Z: stored programs.

2. Select the program number.

3. Closed centrifuge lid: centrifugation starts with the loaded centrifugation parameters and functions.

When the centrifuge lid is open, you can press the start/stop key to return to program 0 or exit the programming mode.

If you change the centrifugation parameters during a run with a stored program, the centrifuge changes to program 0. The stored program remains unchanged. You can also exit the stored program by loading program 0.

6.6 Deleting the program

Prerequisites

- · Rotor stop.
- The centrifuge lid is open.

1. Press once. The program number flashes.

2. Select the program number.

3. Within 10 seconds, keep key pressed for 2 seconds The following text appears in the display: *cleared*. The selected program is deleted. You can save new centrifugation parameters and functions under this program number.

6.7 Special functions6.7.1 Display operating hours

Prerequisite

44

Rotor stop.

Press both keys simultaneously.
 The previous total run time of the centrifuge (in hours) appears in the display.

6.7.2 Switching on/off the warning signal

• Press both keys simultaneously to change the setting. *Alarm on* or *Alarm off* appears in the display after 2 s.

6.7.3 Exiting the service functions

• Press both keys simultaneously to exit a service function called by mistake.

7 Maintenance

7.1 Service

WARNING! Risk of injury due to defective gas spring(s).

A defective gas spring is an insufficient support for the centrifuge lid. There is a risk of crushing fingers or limbs.

- Make sure that the centrifuge lid can be opened fully and that it will remain in this position.
- Regularly check all gas springs for their proper function.
- Have defective gas springs replaced immediately.
- Have gas springs replaced by a service technician every 2 years.

WARNING! Risk of fire or electrical shock

• Have the centrifuge's electrical safety, especially the paths for the protective connections, checked every 12 months by trained and skilled personnel.

We recommend to have the centrifuge and the associated rotors checked by Technical Service during a service at least every 12 months. Please note the country-specific regulations.

7.2 Preparing cleaning/disinfection

- Clean all accessible surfaces of the device and the accessories at least weekly and when contaminated.
- Clean the rotor regularly. This way the rotor is protected and the durability is prolonged.
- Furthermore, observe the notes on decontamination (see *Decontamination before shipment on p. 49*) when the device is sent to the authorized Technical Service for repairs.

The procedure described in the following chapter applies to the cleaning as well as to the disinfection or decontamination. The table below describes the steps required on top of this:

Cleaning	Disinfecting/decontamination
 Use a mild cleaning fluid to clean the accessible surfaces of the device and the accessories. Carry out the cleaning as described in the following chapter. 	 Choose the disinfection method which corresponds to the legal regulations and guidelines in place for your range of application. For example, use alcohol (ethanol, isopropanol) or alcohol-based disinfectants. Carry out the disinfection or decontamination as described in the following chapter. Then clean the device and the accessories.

If you have any further questions regarding the cleaning and disinfection or decontamination or regarding the cleaning fluid to be used, contact the Eppendorf AG Application Support. The contact details are provided on the back of this manual.

7.3 Cleaning/disinfection

DANGER! Electric shock due to the ingress of liquid.

- Switch off the device and disconnect it from the mains/power line before starting cleaning or disinfection.
- Do not allow any liquids to penetrate the inside of the housing.
- Do not perform a spray clean/spray disinfection on the housing.
- Only reconnect the device to the mains/power line when it is completely dry, both inside and outside.

NOTICE! Damage from the use of aggressive chemicals.

- Do not use any aggressive chemicals on the device or its accessories, such as strong and weak bases, strong acids, acetone, formaldehyde, halogenated hydrocarbons or phenol.
- If the device has been contaminated by aggressive chemicals, clean it immediately using a mild cleaning agent.

NOTICE! Corrosion due to aggressive cleaning agents and disinfectants.

- Do not use any corrosive cleaning agents, aggressive solvents or abrasive polishes.
- Do not incubate the accessories in aggressive cleaning agents or disinfectants for longer periods.

NOTICE! Damage from UV and other high-energy radiation.

- Do not use UV, beta, gamma, or any other high-energy radiation for disinfection.
- Avoid storage in areas with strong UV radiation.

NOTICE! Danger due to deformed or brittle tubes. Autoclaving at excessive temperatures can lead to tubes made from plastic becoming brittle and deformed.

This could cause damage to the device and the accessories and sample loss.

- Observe the temperatures specified by the manufacturer when autoclaving tubes.
- Do not use brittle or deformed rechargeable tubes.

Autoclaving

Except for the rotor crosses A-4-81, S-4-72 and S-4-104, all rotors, rotor lids, buckets, carriers, caps and adapters can be autoclaved (121 °C, 20 min).

After a maximum of 50 autoclaving cycles, the caps and, for QuickLock rotors, the seals must be replaced.

Do not use stained, porous or otherwise defective seals. Also note the operating manual of the centrifuge and the supplement sheet on aerosol-tight centrifugation delivered together with the aerosol-tight rotors.

The aerosol-tight rotor FA-45-30-11 can be autoclaved at 142°C for 2 hours to destroy prions. Please note that in this case the rotor lid must be replaced after each autoclaving.

46

Aerosol tightness

Check that the seals are intact before use.

Only QuickLock rotor lid: Replace the sealing ring in the lid groove when it becomes worn. The seals of the rotor S-4-104 can be replaced.

Replace the rotor lids with screw cap when the sealing rings on the lid screw and in the lid groove become worn.

Regular care of the sealing rings is necessary in order to protect the rotors.

Aerosol-tight rotors should never be stored with the lids screwed on!

In order to prevent damage, lightly grease the lid thread of the aerosol-tight rotors regularly with pivot grease (order no. int.: 5810 350.050/North America: 022634330).

The seals of the caps of rotors A-4-81, A-4-62, A-4-44 and A-2-DWP-AT cannot be replaced. If necessary, the caps have to be replaced.

A

Swing-bucket rotors

- Before cleaning the rotor, remove old pivot grease from grooves and pivots.
- Make sure that the grooves and pivots are clean. Dirty grooves and pivots prevent the buckets from swinging out evenly.
- After cleaning, lightly lubricate the pivots of the rotor and the grooves of the buckets with pivot grease (order no. int.: 5810 350.050/North America: 022634330) so that the carriers can move freely in a swinging manner.

7.3.1 Cleaning and disinfecting the device

- 1. Open the lid. Switch the device off at the mains/power switch. Disconnect the mains/power plug from the voltage supply.
- 2. Loosen the rotor nut by turning the rotor key **counterclockwise**.
- 3. Remove the rotor.
- 4. Clean and disinfect all accessible surfaces on the device including the mains/power cord using a damp cloth and recommended cleaning agents.
- 5. Thoroughly clean the rubber seal of the rotor chamber with water.
- 6. Rub the dry rubber seal with glycerol or talcum powder to prevent it from becoming brittle. Other components of the device, such as the lid latch, lid springs, motor shaft and rotor cone, must not be lubricated.
- 7. Clean the motor shaft with a soft, dry, lint-free cloth. Do not grease the motor shaft.
- 8. Check the motor shaft for damage.
- 9. Check the device for corrosion and damage.
- 10. Leave the centrifuge lid open when the device is not being used.
- 11. Only reconnect the device to the power supply if it is fully dry on the inside and outside.

7.3.2 Disinfecting and cleaning the rotor

After every 200 runs, the centrifuge displays *clean rotor* three times to remind you about the regular rotor cleaning.

- 1. Inspect the rotor and accessories for damage and corrosion. Do not use damaged rotors or accessories.
- 2. Clean and disinfect the rotors and accessories with the recommended cleaning agents.
- 3. Clean and disinfect the rotor bores with a bottle brush.
- 4. Rinse the rotors and accessories thoroughly with distilled water. Rinse the rotor bores of fixed-angle rotors particularly thoroughly.

Do not put the rotor into the dishwasher and do not immerse the rotor in liquid as liquid can enter through the openings when doing so.

- 5. Place the rotors and accessories on a towel to dry. Place fixed-angle rotors with the rotor bores facing down so the bores can also dry.
- 6. Clean the rotor cone with a soft, dry, lint-free cloth. Do not lubricate the rotor cone.
- 7. Inspect the rotor cone for damage.
- 8. Place the dry rotor onto the motor shaft.
- 9. Tighten the rotor nut firmly by turning it **clockwise** with the rotor key.
- 10. Load the fixed-angle rotor with the cleaned adapters or the swing-bucket rotor with the cleaned buckets and adapters, if necessary.
- 11. Leave the rotor lid open when the rotor is not being used.

7.4 Additional care instructions for refrigerated centrifuges

- Empty and clean the condensation water tray regularly and especially after liquid spillage in the rotor chamber. Pull out the condensation water tray at the front right under the device.
- Clean the condensation water drain on a regular basis, too, e.g., using a bottle brush.
- Regularly free the rotor chamber from ice formations by thawing, by either leaving the centrifuge lid open or by performing a short temperature control run at approx. 30 °C.
- To take pressure off the gas spring(s), leave the centrifuge lid open if the centrifuge is not used for a longer period.

Residual moisture can escape.

- Wipe up the condensation water in the rotor chamber. Use a soft, absorbent cloth for this.
- No later than every 6 months, remove any dust deposits from the ventilation slits of the centrifuge using a brush or swab. First switch off the device and remove the power plug.

48

7.5 Cleaning glass breakage

When using glass tubes there is a risk of glass breakage in the rotor chamber. The resulting glass splinters are swirled around in the rotor chamber during centrifugation and have a sandblasting effect on the rotor and accessories. The smallest glass particles become lodged in the rubber parts (e.g., the motor guide, the rotor chamber seal, and the rubber mats of adapters).

NOTICE! Glass breakage in the rotor chamber

Glass tubes in the rotor chamber may break if the g-force is too high. Broken glass can damage the rotor, accessories and samples.

• Please note the manufacturer's information on the recommended centrifugation parameters (load and speed).

Effects of glass breakage in the rotor chamber:

- Fine black metal abrasion in the rotor chamber (in metal rotor chambers)
- The surfaces of the rotor chamber and accessories are scratched.
- The chemical resistance of the rotor chamber is reduced.
- Contamination of samples
- Wear on rubber parts

How to proceed in case of glass breakage

- 1. Remove all splinters and glass powder from the rotor chamber and accessories.
- 2. Thoroughly clean the rotor and rotor chamber. Thoroughly clean the bores of the fixed-angle rotors, in particular.
- 3. If required, replace the rubber mats and adapters to prevent any further damage.
- 4. Regularly check the rotor bores for deposits and damage.

7.6 Decontamination before shipment

If you are shipping the device to the authorized Technical Service for repairs or to your authorized dealer for disposal please note the following:

WARNING! Risk to health from contaminated device.

- 1. Observe the information in the decontamination certificate. It is available as a PDF document on our webpage (<u>www.eppendorf.com/decontamination</u>).
- 2. Decontaminate all the parts you are going to dispatch.
- 3. Include the fully completed decontamination certificate in the shipment.

8 Troubleshooting

If you cannot remedy an error with the recommended measures, please contact your local Eppendorf partner. The contact addresses can be found on the Internet at <u>www.eppendorf.com</u>.

8.1 Resetting the excess current switch

Thermal excess current switches are mounted as fuses. If the excess current protection is triggered, they set the switch to OFF. However, they do not automatically switch it on again.

To switch on the excess current switch again, proceed as follows:

- 1. Switch off the centrifuge using the mains/power switch.
- 2. Wait for at least 20 s and switch on the centrifuge again.

The excess current switch is reactivated and the centrifuge is ready for operation.

8.2 General errors

Problem	Cause	Solution
No display.	No mains/power connection.	• Check the mains/power connection.
Display shows Interrupt after the centrifuge has been switched on.	Mains/power outage.	 Check the fuse of the centrifuge (see <i>Resetting the excess current switch on p. 51).</i> Check the mains/power fuse of the lab. Press the open key.
Centrifuge lid cannot be opened.	The rotor is still running.	• Wait for the rotor to stop.
	Mains/power outage.	 Check the fuse of the centrifuge. Check the mains/power fuse of the lab. Activate the emergency lid release.
Clean rotor	200 runs.	 Clean the rotor and rotor chamber (see p. 45).
Centrifuge brakes during a short run centrifugation, although the short key is pressed.	The short key was released briefly more than twice (protective function for the drive).	 Press the short key continuously during a short run centrifugation.

8.3 Error messages

If one of the following error messages appears, proceed as follows:

- 1. Remove fault (see Solution).
- 2. Press the **open** key to clear the error message.
- 3. If necessary, repeat centrifugation.

Some errors can have various causes. The actual cause is described in the message in the device display.

Problem	Cause	Solution
No rotor Centrifuge does not start up.	Missing rotor.	► Insert the rotor.
No rotor Centrifuge does not start up.	Error in the drive or in the rotor detection.	 Switch the centrifuge off and back on again after > 20 s.
Press Open	Centrifuge lid could not be locked.	 Press the open key. Try again to close the centrifuge lid.
Close lid	Centrifuge lid not closed properly.	Close the centrifuge lid firmly.
<i>Lift lid</i> The centrifuge lid does not open.	The centrifuge lid cannot open automatically.	 Lift the centrifuge lid manually.
<i>IMBAL</i> The centrifuge shakes when it starts up and then switches off.	The rotor is asymmetrically loaded.	 Load the rotor symmetrically (see p. 26).
ROTOR The centrifuge shakes when it starts up and then switches off.	The rotor is not fastened sufficiently tight.	 Tighten the rotor nut (see p. 26). Check the rotor cone and motor shaft for grooves and damage.
<i>ROTOR</i> The centrifuge shakes when it starts up and then switches off.	 Centrifuge was pushed. Table is not stable. 	 Position the centrifuge on a stable table (see p. 21).
SPEED Centrifuge switches off.	Nominal speed too high for rotor.	 Enter the appropriate nominal speed (see p. 65).

Problem	Cause	Solution
change rotor	The maximum service life of the rotor has been reached. The warning is displayed after 98,000, 99,000 and 99,600 runs (3 times after each run). After 100,000 runs, it is displayed after every run.	 Contact Technical Service.
Temperature display flashes. (only 5804 R/5810 R)	Temperature deviation from set value: ±3 °C.	 Check the settings. Wait until the set temperature has been reached. Check unhindered air circulation through the air slots. Thaw ice or switch off the centrifuge and allow it to cool down.
Overtemp (only 5804 R/5810 R) Centrifuge switches off and issues a warning tone.	Temperature deviation from set value in the rotor chamber: ±5 °C.	 Check the settings. Check unhindered air circulation through the air slots. Thaw ice or switch off the centrifuge and allow it to cool down.
Clear Memory	Program memory full.	 Delete some programs (see p. 43).
Interrupt	Mains/power failure during a run.	• Check the mains/power connection.
Error 1	Error in the rotational speed measurement system.	 If this error message appears again, test with a different rotor.
Error 2	Imbalance sensor faulty.	Repeat the run.
Error 3	Error in the rotational speed measurement system.	Insert and tighten the rotor.
Error 3	Error in the rotational speed measurement system.	 Allow the centrifuge to stand for 12 min when switched on until the open key lights up.
Error 4	Lid latch sensor faulty.	 Switch the centrifuge off and back on again after > 20 s.
Error 5	Prohibited opening of lid or lid switch is defective during a run.	 Wait for the rotor to stop. Open the centrifuge lid and then close it again. Repeat the run.
Error 6 or overload	Mains/power supply voltage is too low.	 Check the mains/power supply voltage.
Error 6 or overload	Frequency converter overloaded.Brake faulty.	 Switch off centrifuge, allow to cool down for at least 5 min, and then switch on again.
Error 8	Drive fault.Rotor loose.Motor defective.	 Wait for the rotor to stop. Tighten the rotor. Repeat the run.
Error 9 to Error 25	Electronics fault.	 Switch the centrifuge off and back on again after > 20 s.

8.4 Emergency release

If the centrifuge lid cannot be opened, you can activate the emergency release manually.

WARNING! Risk of injury from rotating rotor.

If the emergency release of the lid is operated, the rotor may continue to rotate for several minutes.

- Wait for the rotor to stop before activating the emergency release.
- To check, look through the monitoring glass in the centrifuge lid.

You need the standard rotor key supplied with the centrifuge.

- 1. Disconnect the power plug.
- 2. Remove the plastic cover for the emergency release. This is located in the center on the front side of the device.
- 3. Insert the rotor key into the hexagonal opening behind until some resistance can be felt.
- 4. While keeping the rotor key pressed, turn it in a counterclockwise direction. This will release the centrifuge lid.
- 5. Open the centrifuge lid.
- 6. Remove the rotor key and put the plastic covers back on.

9 Transport, storage and disposal9.1 Transport

CAUTION! Risk of injury due to lifting and carrying of heavy loads The device is heavy. Lifting and carrying the device can lead to back injuries.

- Transport and lift the device with an adequate number of helpers only.
- Use a transport aid for transporting the device.
- Remove the rotor from the centrifuge before transport.
- Use the original packing for transport.

	Air temperature	Relative humidity	Atmospheric pressure
General transport	-25 °C – 60 °C	10 % - 75 %	30 kPa – 106 kPa
Air freight	-20 °C – 55 °C	10 % - 75 %	30 kPa – 106 kPa

9.2 Storage

	Air temperature	Relative humidity	Atmospheric pressure
In transport packing	-25 °C – 55 °C	10 % - 75 %	70 kPa – 106 kPa
Without transport packing	-5 °C – 45 °C	10 % – 75 %	70 kPa – 106 kPa

9.3 Disposal

If the product needs to be disposed of, the relevant legal regulations must be observed.

Information on the disposal of electrical and electronic devices in the European Community:

Within the European Community, the disposal of electrical devices is regulated by national regulations based on EU Directive 2012/19/EU pertaining to waste electrical and electronic equipment (WEEE).

According to these regulations, any devices supplied after August 13, 2005, in the business-to-business sphere, to which this product is assigned, may no longer be disposed of in municipal or domestic waste. To document this, they have been marked with the following marking:

Because disposal regulations may differ from one country to another within the EU, please contact your supplier if necessary.

Tab. 10-3: Approximate deceleration times of the different rotors for the levels 0 to 9 (in seconds) for 230 V devices

These values are to be considered as guidelines. Level 9 means "strongest braking", level 0 means "free deceleration". Considerable fluctuations can occur depending upon the condition of the device and the load. The deceleration times for the 230 and 120 V devices are almost identical.

10.5 Service life of accessories

WARNING! Risk of injury from chemically or mechanically damaged accessories. Even minor scratches and cracks can lead to severe internal material damage.

- Protect all accessory parts from mechanical damage.
- Inspect the accessories for damage before every use. Replace any damaged accessories.
- Do not use rotors, rotor lids, buckets or caps showing signs of corrosion or mechanical damage (e.g., deformations).
- Do not use any accessories which have exceeded their maximum service life.
- When inserting the buckets and rotors, ensure that they do not become scratched.

CAUTION! Risk of injury due to chemically damaged rotor lids or caps. Transparent rotor lids or caps made from PC, PP or PEI may loose their strength under the impact of organic solvents (e.g., phenol, chloroform).

- If rotor lids or caps have come into contact with any organic solvents, they should be cleaned immediately.
- Check the rotor lids and caps regularly for any damage and cracks.
- Immediately replace any rotor lids or caps which show cracks or milky stains.

Eppendorf states the maximum service life of rotors and accessories in cycles and years. The number of cycles is decisive. If determination of the number of cycles is not possible, the service life in years applies.

Each centrifugation run during which the rotor is accelerated and braked is counted as a cycle, independent of the speed and the duration of the centrifugation run.

Rotor	Maximum service life	after initial setup	
A-2-DWP-AT	100000 cycles	15 years	
A-2-DWP	34000 cycles	7 years	
A-4-44	34000 cycles	7 years	
A-4-62	40000 cycles	7 years	
A-4-81	100000 cycles	15 years	
F-34-6-38	75000 cycles	10 years	
FA-45-6-30	100000 cycles	15 years	
FA-45-48-11	100000 cycles	15 years	
FA-45-20-17	100000 cycles	15 years	
F-35-48-17	100000 cycles	15 years	
S-4-72	100000 cycles	15 years	
S-4-104	100000 cycles	15 years	
T-60-11	n/a	7 years	

Unless stated otherwise (in the manual of the centrifuge, indication of the number of cycles on the rotor, in the instructions for use of the rotor), all other rotors and rotor lids can be used over the entire service life of the centrifuge if the following prerequisites are met:

- proper use
- recommended maintenance
- undamaged condition

Accessories	Maximum service life after initi	ial setup
Rotor lid of polycarbonate (PC), polypropylene (PP) or polyetherimide (PEI)	_	3 years
Aerosol-tight rotor lid, without replaceable seals	50 autoclaving cycles	-
QuickLock rotor lid		3 years
Seals of the QuickLock rotor lids	50 autoclaving cycles	-
Caps of polycarbonate (PC), polypropylene (PP) or polyetherimide (PEI)	50 autoclaving cycles	3 years
Adapter	-	1 year

The date of manufacture is stamped on the rotors and buckets in the format 03/15 or 03/2015 (= March 2015). On the inside of the plastic-rotor lids and aerosol-tight caps, the date of manufacture is stamped in the form of a clock B.

Measures to ensure aerosol tightness:

- Replace the seal of QuickLock rotor lids after 50 autoclaving cycles.
- Exchange aerosol-tight rotor lids without replaceable seals after 50 autoclaving cycles.
- Replace aerosol-tight caps after 50 autoclaving cycles.

10.6 Rotors

Eppendorf centrifuges may only be operated with rotors that are intended for use with the corresponding centrifuge.

• Only use rotors that are marked with the name of the centrifuge (e.g., 5804 R).

The Centrifuge 5804/5804 R/5810/5810 R can be operated with the following rotors. When using sample tubes, observe the manufacturers' information regarding centrifugation stability (max. g-force).

10.6.1 Rotor A-4-81 (only 5810/5810 R) 10.6.1.1 Rotor A-4-81 with 500 mL rectangular bucket

A

NOTICE! Buckets swinging out in the wrong direction.

If the wrong adapters are used for 500 mL Corning flasks, the buckets of the swing-bucket rotor may swing out in the wrong direction. If the buckets swing out in the wrong direction, this may lead to sample loss or damage to the centrifuge.

> Therefore, only use the Eppendorf adapters for 500 mL Corning flasks intended for this purpose.

Do no	t use an aerosol-tigh	t bucket cap with Co	rning 50 mL conical tubes.

11 **Ordering information**

11.1 Rotors

11.1.1 Rotor A-4-81 (only 5810/5810 R) 11.1.1.1 Rotor A-4-81, 500 mL bucket

Order no.	Order no.	Description
(International)	(North America)	
		Rotor A-4-81
		for 500 mL rectangular buckets or MTP/Flex-buckets
5810 718.007	022638602	incl. 4 × 500 mL rectangular buckets
		Rotor A-4-81
5810 743.001	5810743001	without buckets
		Rectangular bucket 500 mL
5810 730.007	022638629	Set of 4
		Aerosol-tight cap
5810 724.007	022638661	for 500 mL rectangular buckets, 2 pieces
		Adapter
		for 500 mL rectangular buckets
5810 745.004	022638704	for 20 sample tubes (1.5/2.0 mL, max. Ø 11 mm), set of 2
5810 746.000	022638707	for 20 blood collection tubes (1.2 – 5 mL, max. Ø 11 mm),
		set of 2
5810 720.001	022638700	for 24 tubes (2.6 – 7 mL, max. Ø 13 mm), set of 2
5825 717.007	022638718	for 18 tubes (5 mL, Monovette, max. Ø 13 mm), set of 2
5810 748.003	022638721	for 16 blood collection tubes (3 – 15 mL, max. Ø 16 mm),
		set of 2
5810 721.008	022638726	for 16 tubes (7 – 17 mL, max. Ø 17.5 mm), set of 2
5810 722.004	022638742	for 12 conical tubes (15 mL, max. Ø 17.5 mm), set of 2
5810 723.000	022638769	for 5 conical tubes (50 mL, max. Ø 31 mm), set of 2
5810 739.004	022638904	for 5 Centrifugal Filter Units (max. Ø 31 mm), set of 2
5825 722.000	022638921	for 1 bottle (180 – 250 mL, max. Ø 62 mm), set of 2
5810 728.002	022638785	for 1 bottle (400 mL, max. Ø 81 mm), set of 2
		Adapter
5804 737.008	022654373	for 50 mL skirted conical tubes, set of 8
		Rubber mat
		for adapters for 500 mL rectangular buckets
5810 734.002	022638688	4 pieces
		Replacement clamp
		for adapters for 500 mL rectangular buckets
5810 735.009	022638696	2 pieces
		Wide-neck bottle
		for rotor A-4-81
5810 729.009	022638653	400 mL, lid blue, set of 2
5820 707.003	022638657	500 mL, rectangular, set of 2
		Rotor key
5810 718.309	022664174	for Rotor A-4-81, S-4-104

Order no.	Order no.	Description
(International)	(North America)	
		Rotor A-4-81-MTP/Flex
5810 725.003	022638807	Swing-bucket rotor, incl. 4 MTP/Flex buckets
		MTP/Flex buckets
		for use with IsoRack and cell culture flask adapters as well as
		MTP and DWP
5810 741.009	022638840	4 pieces
5810 742.005	022638866	2 pieces
		IsoRack adapter
5825 708.008	022638980	for 24×0.5 mL tubes in the IsoRack, 2 pcs.
5825 709.004	022638998	for $24 \times 1.5/2.0$ mL tubes in the IsoRack, 2 pcs.
		IsoRack starter set for Flex buckets
		2 × IsoRack Adapter, 2 × IsoRacks with lid, 2 × IsoPack 0 °C
5825 721.004	022510070	for 0.5 mL and 1.5/2.0 mL tubes
		Adapter
		used in A-4-81-MTP/Flex, A-4-62-MTP, A-2-DWP-AT and
		A-2-DWP
5825 711.009	022638947	for 96-well PCR plates, set of 2
5825 713.001	022638955	for 384-well PCR plates, set of 2
		Adapter
		used in A-4-81-MTP/Flex, A-4-62-MTP and A-2-DWP
5825 706.005	022638963	CombiSlide Adapter, set of 2
		Adapter
		used in A-4-81-MTP/Flex and A-4-62-MTP
5825 719.000	5825719000	for 1 cell culture bottle, set of 2

11.1.1.2 Rotor A-4-81, MTP/Flex buckets

11.1.1.3 Rotor A-4-81, buckets for conical tubes

Order no.	Order no.	Description	
(International)	(North America)		
		Bucket for 7 × 50 mL conical tubes	
		for Rotor A-4-81	
5825 730.003	5825730003	set of 4 pcs.	
		Adapter	
		used in FA-45-6-30	
5820 718.005	5820718005	for 15 mL conical tubes, set of 7	

11.1.2	Rotor A-4-62 and A-4-62-MTP (only 5810/5810 R)
11.1.2.1	Rotor A-4-62

Order no.	Order no.	Description
(International)	(North America)	
		Rotor A-4-62
5810 709.008	022638009	incl. 4 \times 250 mL rectangular buckets
		Rectangular bucket 250 mL
5810 716.004	022638084	Set of 4
		Aerosol-tight cap
5810 710.006	022638033	for 250 mL rectangular buckets, set of 2
		Adapter
		for 250 mL rectangular buckets
5810 751.004	022638220	for 16 sample tubes (1.5/2.0 mL, max. Ø 11 mm), set of 2
5810 750.008	022638203	for 25 tubes (1.2 – 5 mL, max. Ø 11 mm), set of 2
5810 752.000	022638246	for 15 tubes (2.6 – 7 mL, max. Ø 13 mm), set of 2
5810 753.007	022638262	for 12 tubes (3 – 15 mL, max. Ø 16 mm), set of 2
5810 754.003	022638301	for 12 tubes (7 – 17 mL, max. Ø 17.5 mm), set of 2
5810 756.006	022638327	for 8 tubes (7 – 18 mL, max. Ø 20 mm), set of 2
5810 757.002	022638360	for 4 tubes (18 – 30 mL, max. Ø 26 mm), set of 2
5810 759.005	022638386	for 4 tubes (30 – 50 mL, max. Ø 31 mm), set of 2
5810 760.003	022638408	for 2 tubes (50 – 75 mL, max. Ø 35 mm), set of 2
5810 761.000	022638424	for 1 tube (80 – 120 mL, max. Ø 45 mm), set of 2
5810 770.009	022638441	for 1 bottle (180 – 250 mL, max. Ø 62 mm), set of 2
5810 755.000	022638289	for 9 conical tubes (15 mL, max. Ø 17.5 mm), set of 2
5810 758.009	022638343	for 3 conical tubes (50 mL, max. Ø 31 mm), set of 2
5810 763.002	022638351	for 4 conical tubes (50 mL), operation w/o aerosol-tight cap,
		set of 2
		Adapter
5804 737.008	022654373	for 50 mL skirted conical tubes, set of 8
		Rubber mat
		for adapters for 250 mL rectangular buckets
5810 782.007	022638483	Set of 4
		Replacement clamp
		for adapters for 250 mL rectangular buckets
5810 781.000	022662431	Set of 2
		Rubber mat
		for adapter 5810 770.009/022638441
5810 783.003	022638459	Set of 4

11.1.2.2 Rotor A-4-62-MTP

Order no.	Order no.	Description
(International)	(North America)	
		Rotor A-4-62-MTP
5810 711.002	022638041	incl. 4 MTP buckets
		MTP bucket for A-4-62
		for 4 MTP or 1 DWP
5810 702.003	022638068	Set of 4
		Adapter
		used in A-4-81-MTP/Flex, A-4-62-MTP, A-2-DWP-AT and
		A-2-DWP
5825 711.009	022638947	for 96-well PCR plates, set of 2
5825 713.001	022638955	for 384-well PCR plates, set of 2
		Adapter
		used in A-4-81-MTP/Flex, A-4-62-MTP and A-2-DWP
5825 706.005	022638963	CombiSlide Adapter, set of 2

11.1.3 Rotor A-4-44

Order no.	Order no.	Description
(International)	(North America)	
		Rotor A-4-44
5804 709.004	022637401	incl. 4×100 mL rectangular buckets
		Rectangular bucket 100 mL
5804 741.005	022637436	4 pieces
		Aerosol-tight cap
5804 712.005	022637428	for 100 mL rectangular buckets, set of 2
		Adapter for 100 mL rectangular bucket
5804 751.000	022637525	for 12 sample tubes (1.5/2.0 mL, max. Ø 11 mm), set of 2
5804 750.004	022637509	for 14 tubes (1.2 – 5 mL, max. Ø 11 mm), set of 2
5804 752.007	022637541	for 9 tubes (2.6 – 7 mL, max. Ø 13 mm), set of 2
5804 753.003	022637568	for 7 tubes (3 – 15 mL, max. Ø 16 mm), set of 2
5804 754.000	022637584	for 6 tubes (7 – 17 mL, max. Ø 17.5 mm), set of 2
5804 756.002	022637622	for 4 tubes (7 – 18 mL, max. Ø 20 mm), set of 2
5804 757.009	022637649	for 2 tubes (18 – 30 mL, max. Ø 26 mm), set of 2
5804 759.001	022637681	for 1 tube (30 – 50 mL, max. Ø 31 mm), set of 2
5804 760.000	022637703	for 1 tube (50 – 75 mL, max. Ø 35 mm), set of 2
5804 761.006	022637720	for 1 tube (80 – 100 mL, max. Ø 45 mm), set of 2
5804 755.006	022637606	for 4 conical tubes (15 mL, max. Ø 17.5 mm), set of 2
5804 717.007	022637614	for 2 conical tubes (15 mL, max. Ø 17.5 mm), set of 2
5804 758.005	022637665	for 1 conical tube (50 mL, max. Ø 31 mm), set of 2
5804 718.003	022637673	for 1 conical tube (50 mL, max. Ø 31 mm), set of 2
		Adapter
5804 737.008	022654373	for 50 mL skirted conical tubes, set of 8
		Rubber mat
		for adapters of Rotor A-4-44
5804 782.003	022662503	Set of 4

Order no.	Order no.	Description
(International)	(North America)	
		Replacement clamp
		for adapters of rotor A-4-44
5804 781.007	022662511	Set of 2
		Bucket for 2 × 50 mL conical tubes
		for Rotor A-4-44
5804 706.005	5804706005	set of 4 pcs.
		Adapter
		Form inserts for buckets with conical tubes
5804 728.009	022637479	for 1 conical tube (50 mL, max. Ø 31 mm), set of 8

11.1.4 Rotor A-2-DWP-AT (only 5810/5810 R)

Order no.	Order no.	Description
(International)	(North America)	
		Rotor A-2-DWP-AT
5820 710.004	5820710004	incl. 2 buckets, 2 aerosol-tight caps and 2 plate holders
		Bucket for rotor A-2-DWP-AT
5820 711.000	5820711000	2 pieces
		Aerosol-tight cap
5820 713.003	5820713003	2 pieces
		Plate carrier
		Rotors A-2-DWP-AT
5820 712.007	5820712007	2 pieces
		Adapter
		used in A-4-81-MTP/Flex, A-4-62-MTP, A-2-DWP-AT and
		A-2-DWP
5825 711.009	022638947	for 96-well PCR plates, set of 2
5825 713.001	022638955	for 384-well PCR plates, set of 2

11.1.5 Rotor A-2-DWP

Order no.	Order no.	Description
(International)	(North America)	
		Rotor A-2-DWP
5804 740.009	022638564	Deepwell plates rotor, incl. 2 buckets
		Plate bucket
		used in A-2-DWP
5804 743.008	022638556	2 pieces
		SBS adapter
		for plates with rims in the SBS format
5825 718.003	5825718003	Set of 2
		IsoRack adapter
5825 708.008	022638980	for 24×0.5 mL tubes in the IsoRack, 2 pcs.
5825 709.004	022638998	for $24 \times 1.5/2.0$ mL tubes in the IsoRack, 2 pcs.

Order no.	Order no.	Description
(International)	(North America)	
		Adapter
		used in A-4-81-MTP/Flex, A-4-62-MTP, A-2-DWP-AT and
		A-2-DWP
5825 711.009	022638947	for 96-well PCR plates, set of 2
5825 713.001	022638955	for 384-well PCR plates, set of 2
		Adapter
		used in A-4-81-MTP/Flex, A-4-62-MTP and A-2-DWP
5825 706.005	022638963	CombiSlide Adapter, set of 2

11.1.6 Rotor FA-45-6-30

Order no.	Order no.	Description
(International)	(North America)	
		Rotor FA-45-6-30
5820 715.006	5820715006	aerosol-tight*, aluminum, 45° angle, 6 places, for 15/
		50 mL conical tubes, incl. rotor lid (aluminum)
		Rotor lid for FA-45-6-30
5820 716.002	5820716002	aerosol-tight, aluminum
		Seal for rotor lid
		FA-45-18-11 (5418/5418 R), FA-45-6-30 (5804/5804 R/5810/
		5810 R), FA-6×50 (5910 R, 5920 R)
5418 709.008	022652109	5 pieces
		Adapter
		used in rotor FA-45-6-30
5820 717.009	5820717009	for 1 conical tubes 15 mL (max. Ø 17 mm), set of 2 pieces
5820 720.000	5820720000	for 1 Oak Ridge 16 mL (max. Ø 18 mm), set of 2 pieces
5820 721.006	5820721006	for 1 Oak Ridge 30 mL (max. Ø 26 mm), set of 2 pieces
5820 722.002	5820722002	for 1 Oak Ridge 35 mL (max. Ø 30 mm), set of 2 pieces
5820 730.005	5820730005	for 1 tube 5 mL (max. Ø 17 mm, set of 2 pieces
5820 726.008	5820726008	for 1 round-bottom and blood collection tube
		(13 mm × 75 mm), set of 2 pieces
5820 725.001	5820725001	for 1 round-bottom and blood collection tube
		(13 mm × 100 mm), set of 2 pieces
5820 728.000	5820728000	for 1 Oak Ridge 10 mL, round-bottom and blood collection
		tube (13 mm × 75 mm), set of 2 pieces
5820 727.004	5820727004	for 1 round-bottom and blood collection tube
		(16 mm × 100 mm), set of 2 pieces
5820 729.007	5820729007	for 1 round-bottom and blood collection tube
		(17,5 mm × 100 mm), set of 2 pieces

Order no.	Order no.	Description
(International)	(North America)	
		Rotor F-34-6-38
5804 727.002	022637207	34° angle, 6 places for 85 mL tubes, incl. rotor lid
		Rotor lid
5804 727.509	5804727509	for F-34-6-38
		Adapter
		used in F-34-6-38
5804 770.005	022637215	for 4 sample tubes 1.5/2.0 mL (max. Ø 11 mm), set of 2
5804 777.000	5804777000	for 1 tube 5 mL (max. Ø 17 mm), set of 2 pieces
5804 738.004	022637279	for 3 round-bottom and blood collection tubes $(13 \times 75 \text{ mm})$,
		set of 2 pieces
5804 739.000	022637282	for 3 round-bottom and blood collection tubes (13 × 100 mm),
		set of 2 pieces
5804 771.001	022637223	for 2 tubes (7 bis 15 mL, max. Ø 16 mm), set of 2
5804 776.003	022637274	for 1 conical tube (15 mL, max. Ø 17 mm), set of 2
5804 772.008	022637231	for 1 tube (15 bis 18 mL, max. Ø 18 mm), set of 2
5804 773.004	022637240	for 1 tube (20 bis 30 mL, max. Ø 26 mm), set of 2
5804 774.000	022637258	for 1 tube (50 mL, max. Ø 29 mm), set of 2
5804 775.007	022637266	for 1 conical tube (50 mL, max. Ø 29.5 mm), set of 2

11.1.7 Rotor F-34-6-38

11.1.8 Rotor FA-45-30-11 and rotor F-45-30-11

Order no.	Order no.	Description
(International)	(North America)	
		Rotor FA-45-30-11
5804 726.006	022637100	aerosol-tight*, 45° angle, 30 places for 1.5/2.0 mL tubes, incl.
		rotor lid (aluminum)
		Rotor lid for FA-45-30-11
5804 736.001	022637126	aerosol-tight, aluminum
		Rotor F-45-30-11
5804 715.004	022637002	45° angle, 30 places for 1.5/2.0 mL tubes, incl. rotor lid
		(aluminum)
		Rotor lid for F-45-30-11
5804 715.403	022662970	not aerosol-tight, aluminum
		Adapter
		used in FA-45-30-11 and F-45-30-11
5425 715.005	022636260	for 1 PCR tube (0.2 mL, max. Ø 6 mm), set of 6
5425 717.008	022636243	for 1 micro test tube (0.4 mL, max. Ø 6 mm), set of 6
5425 716.001	022636227	for 1 sample tube (0.5 mL, max. Ø 6 mm) or 1 Microtainer
		(0.6 mL, max. Ø 8 mm), set of 6

11.1.9 Rotor F-45-48-PCR

Order no. (International)	Order no. (North America)	Description
	000/00501	Rotor F-45-48-PCR
5804 735.005	022638581	45° angle, for 6×8 -tube strips, 6×5 -tube strips or 48 × 0.2 mL PCR tubes

11.1.10 Rotor T-60-11

Order no.	Order no.	Description
(International)	(North America)	
		Rotor T-60-11
		for 1.5/2.0 mL tubes, without adapter
5804 730.003	5804730003	incl. rotor lid
		Adapter
		used in T-60-11
5804 731.000	022638521	for 10 sample tubes (1,5/2,0 mL, max. Ø 11 mm), set of 6
5804 732.006	022638548	for 20 sample tubes (0.4 mL, max. Ø 6 mm), set of 6

11.1.11 Rotor S-4-104

Order no.	Order no.	Description
(International)	(North America)	
		Rotor S-4-104
5820 740.000	5820740000	incl. 4 × 750 mL round buckets
5820 754.001	5820754001	incl. 4 plate buckets (aerosol-tight capable)
5820 755.008	5820755008	without buckets
		Adapter
		used in rotor S-4-104
5825 740.009	5825740009	for 50 tubes 1,5 mL/2,0 mL (max. Ø 11 mm), set of 2 pieces
5825 739.000	5825739000	for 14 tubes 5 mL (max. Ø 17 mL), set of 2 pieces
5825 738.004	5825738004	for 23 round-bottom tubes and blood collection tubes
		(13 mm × 75 - 100 mm), set of 2 pieces
5825 736.001	5825736001	for 20 round-bottom tubes and blood collection tubes
		(16 mm × 75 - 100 mm), set of 2 pieces
5825 743.008	5825743008	for 20 round-bottom tubes and blood collection tubes
		(17,5 mm \times 100 mm), set of 2 pieces
5825 734.009	5825734009	for 14 conical tubes 15 mL (max. Ø 17 mm), set of 2 pieces
5825 733.002	5825733002	for 7 conical tubes 50 mL (max. Ø 30 mm), set of 2 pieces
5825 732.006	5825732006	for 5 skirted conical tubes (max. Ø 30 mm), set of 2 pieces
5825 741.005	5825741005	für 1 tube 175 - 250 mL (max. Ø 62 mm), set of 2 pieces
5825 745.000	5825745000	for 1 Corning 500 mL Centrifuge Tube (max. Ø 96 mL), set of
		2 pieces
5825 744.004	5825744004	for 1 wide-neck bottle 750 mL (max. Ø 102 mL), set of 2 pieces

Order no.	Order no.	Description
(International)	(North America)	
		Wide-neck bottle
		for rotor S-4-104, rotor S-4x750
5820 708.000	5820708000	750 mL, set of 2
		Round bucket 750 mL
		for Rotor S-4-104
5820 742.003	5820742003	set of 2 pcs.
5820 741.007	5820741007	set of 4 pcs.
		Plate bucket (aerosol-tight capable)
		for Rotor S-4-104, incl. plate carrier
5820 744.006	5820744006	set of 2 pcs.
5820 743.000	5820743000	set of 4 pcs.
		Plate bucket (open)
		for rotor S-4-104
5820 758.007	5820758007	set of 2
5820 757.000	5820757000	set of 4
		Aerosol-tight cap
		Rotors S-4-104, S-4x750, Plate Bucket
5820 748.001	5820748001	2 pieces
		Plate carrier
		Rotor S-4-104, S-4×750
5820 756.004	5820756004	2 pieces
		Bucket for microfluidic card
		for Rotor S-4-104
5820 751.002	5820751002	set of 4 pcs.
		Sealings for aerosol-tight caps
		Rotors S-4-104, S-4×750, S-4×1000, Plate/Tube Bucket
5820 780.002	5820780002	4 pieces
		Aerosol-tight cap
		Rotors S-4-104, S-4×750, S-4×1000, round bucket 750 mL/
		1000 mL
5820 747.005	5820747005	2 pieces
		Sealings for aerosol-tight caps
		Rotors S-4-104, S-4×750, S-4×1000, round bucket 750 mL/
		1000 mL
5820 749.008	5820749008	4 pieces
		Rotor key
5810 718.309	022664174	for Rotor A-4-81, S-4-104

11.1.12 Rotor S-4-72

Order no.	Order no.	Description
(International)	(North America)	
		Rotor S-4-72
5804 746.007	5804746007	incl. 4 × 250 mL round buckets
		Adapter
		used in rotor S-4-72
5804 794.001	5804794001	for 26 tubes 1,5/2,0 mL (max. Ø 11 mm), set of 2 pieces
5804 793.005	5804793005	for 8 tubes 5 mL (max. Ø 17 mm), set of 2 pieces
5804 789.008	5804789008	for 14 round-bottom und blood collection tubes
		(13 mm × 75 - 100 mm), set of 2 pieces
5804 791.002	5804791002	for 13 round-bottom und blood collection tubes
		(16 mm × 75 - 100 mm), set of 2 pieces
5804 792.009	5804792009	for 12 round-bottom und blood collection tubes
		(17,5 mm × 100 mm), set of 2 pieces
5804 783.000	5804783000	for 8 conical tubes 15 mL (max. Ø 17 mm), set of 2 pieces
5804 784.006	5804784006	for 4 conical tubes 50 mL (max. Ø 30 mm), set of 2 pieces
5804 785.002	5804785002	for 2 conical tubes 15 mL, 50 mL (max. Ø 17 mm, Ø 30 mm),
		set of 2 pieces
5804 787.005	5804787005	for 1 tube 175 - 250 mL (max. Ø 62 mm), set of 2 pieces
		Round bucket 250 mL
		for Rotor S-4-72
5804 747.003	5804747003	Set of 4 pcs.

11.1.13 Rotor F-35-48-17

Order no.	Order no.	Description
(International)	(North America)	
		Rotor F-35-48-17
		for 24 × 15 mL conical tubes
5820 771.003	5820771003	incl. 24 steel sleeves and adapters
		Rotor F-35-48-17
		for 40 × 15 mL conical tubes
5820 772.000	5820772000	incl. 48 steel sleeves and adapters
		Steel sleeves and adapter
		for vessels 15 mL
5820 774.002	5820774002	for rotors F-35-48-17 (5804/5804 R/5810/5810 R) , F-48×15
		(5910 R) (5804/5804 R/5810/5810 R) , F-48×15 (5910 R)

11.1.14 Rotor FA-45-48-11

Order no.	Order no.	Description
(International)	(North America)	
		Rotor FA-45-48-11
		for $48 \times 1.5/2.0$ mL tubes, aerosol-tight
5820 760.001	5820760001	incl. rotor lid
		Rotor lid, aerosol-tight
		for rotor FA-45-48-11
5820 761.008	5820761008	1 pieces
		Seal for rotor lid
		FA-45-24-11-Kit (5427 R/530/5430 R), FA-45-48-11 (5427 R/
		5430/5430 R, 5804/5804 R/5810/5810 R), FA-30x2 (5910 R,
		5920 R), FA-48x2 (5910 R, 5920 R)
5820 767.006	5820767006	5 pieces

11.1.15 Rotor FA-45-20-17

Order no.	Order no.	Description
(International)	(North America)	
		Rotor FA-45-20-17
		for 20 Eppendorf Tubes 5.0 mL
5820 765.003	5820765003	incl. rotor lid
		Rotor lid, aerosol-tight
		for rotor FA-45-20-17
5820 766.000	5820766000	1 pieces
		Seal for rotor lid
		FA-45-20-17 (5804/5804 R/5810/5810 R), FA-20x5 (5910 R,
		5920 R)
5409 718.002	5409718002	5 pieces
		Adapter
		used in rotor FA-45-12-17 (5427 R), FA-45-16-17 (5430/
		5430 R), FA-45-20-17 (5804/5804 R/5810/5810 R)
5820 768.002	5820768002	for 1 tube 1,5 mL/2,0 mL (max. Ø 11 mm), set of 10 pieces
5820 769.009	5820769009	for 1 Cryo tube, set of 4 pieces
		Adapter
		used in Rotor FA-45-12-17 (5427 R), FA-45-16-17 (5430/
		5430 R), FA-45-20-17 (5804/5804 R/5810/5810 R)
5820 770.007	5820770007	for 1 HPLC vial, set of 10 pieces

This is to certify that representative samples of

LABORATORY USE ELECTRICAL EQUIPMENT

Models 5804, 5805T, 5805F, 5810, 5811T, 5811F

Have been investigated by Underwriters Laboratories in accordance with the Standard(s) indicated on this Certificate.

Standard(s) for Safety:UL 61010-1, (Electrical Equipment for Measurement, Control, and Laboratory
Use; Part 1: General Requirements)
CAN/CSA-C22.2 No. 61010-1, (Electrical Equipment for Measurement, Control,
and Laboratory Use; Part 1: General Requirements)
IEC 61010-2-020-Safety Requirements for Electrical Equipment for
Measurement, Control, and Laboratory use.

Additional Information: See UL On-line Certification Directory at <u>WWW.UL.COM</u> for additional information.

This is to certify that representative samples of the product as specified on this certificate were tested according to the current UL requirements.

Only those products bearing the UL Listing Mark for the US and Canada should be considered as being covered by UL's Listing and Follow-Up Service meeting the appropriate requirements for US and Canada.

The UL Listing Mark for the US and Canada generally includes: the UL in a circle symbol with "C" and "US"

identifiers: Whe word "LISTED"; a control number (may be alphanumeric) assigned by UL; and the product category name (product identifier) as indicated in the appropriate UL Directory.

Look for the UL Listing Mark on the product

Certificate of Containment Testing

Containment Testing of Swing Out Rotor with Buckets [A-2-DWP-AT (5820 710.004-00)] and Autoclaved (x50) lids in the Eppendorf Centrifuge 5810

Report No. 104-09 B

Report prepared for: Eppendorf AG, Hamburg, Germany **Issue Date:** 31st March 2010 (amended 17th Aug 10)

Test Summary

Swing out rotor with buckets [A-2-DWP-AT (5820 710.004-00)] and autoclaved (x50) lids was containment tested in the Eppendorf 5810 centrifuge, in accordance with Annex AA of IEC 1010-2-20. The sealed bucket was shown to contain the spill of micro-organisms and therefore prevent any release.

Certificate of Containment Testing

Containment Testing of Rotor A-4-44 and Sealed Buckets and Lids (Cap 100, Order no. 5804 712.005) in the Eppendorf Centrifuge 5810

Report No. 352-97 (Part 1)

Report prepared for: Eppendorf AG, Hamburg, Germany Issue Date: Original report issued 8th September 1997 Certificate issued 18th October 2010

Test Summary

Rotor A-4-44 and sealed buckets and lids (Cap 100, Order no. 5804 712.005) were containment tested in the Eppendorf Centrifuge 5810, using Annex AA of IEC 1010-2-020. The sealed buckets were shown to contain the spill within the centrifuge.

Certificate of Containment Testing

Containment Testing of Rotor A-4-62 and Sealed Buckets and Lids (Cap 250/1, Order no. 5810 710.006) in the Eppendorf Centrifuge 5810

Report No. 352-97 (Part 2)

Report prepared for: Eppendorf AG, Hamburg, Germany Issue Date: Original report issued 8th September 1997 Certificate issued 18th October 2010

Test Summary

Rotor A-4-62 and sealed buckets and lids (Cap 250/1, Order no. 5810 710.006) were containment tested in the Eppendorf Centrifuge 5810, using Annex AA of IEC 1010-2-020. The sealed buckets were shown to contain the spill within the centrifuge.

400ml Rectangular Buckets fitted with Sealed Caps in Eppendorf Centrifuge 5810 containing Rotor A-4-81

Report No. 1000-06

Report prepared for: Eppendorf AG, Hamburg, Germany **Issue Date:** 21st March 2006

Test Summary

400 ml rectangular buckets fitted with sealed caps were containment tested in the Eppendorf centrifuge 5810 containing rotor A-4-81, using Annex AA of IEC 1010-2-20. The buckets were shown to contain a large spill.

Certificate of Containment Testing

Containment Testing of Rotor FA-45-6-30 [(5820 715.103-00) and autoclaved lid (x50)] in the Eppendorf Centrifuge 5810R

Report No. 40-10B

Report prepared for: Eppendorf AG, Hamburg, Germany **Issue Date:** 19th July 2010 (amended 17th Aug 10)

Test Summary

Rotor FA-45-6-30 (5820 715.103-00) and autoclaved lid (x50) was containment tested in the Eppendorf centrifuge 5810R, in accordance with Annex AA of IEC 1010-2-20. The sealed rotor was shown to contain the spill of microorganisms and therefore prevent any release.
